264	`    height: 100%;`	**CSS Property: height = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
265	`    object-fit: cover;`	**CSS Property: object-fit = cover** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
266	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
267		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
268	`/* Element: sidebar__info */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
269	`.sidebar__info {`	**Execute: .sidebar__info {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
270	`    overflow: hidden;`	**CSS Property: overflow = hidden** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
271	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
272		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
273	`/* Element: sidebar__name */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
274	`.sidebar__name {`	**Execute: .sidebar__name {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
275	`font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
276	`/* text-xs */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
277	`font-weight: var(--font-semibold, 600);`	**CSS Property: font-weight = var(--font-semibold, 600)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
278	`color: var(--tertiary);`	**CSS Property: color = var(--tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
279	`overflow: hidden;`	**CSS Property: overflow = hidden** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
280	`text-overflow: ellipsis;`	**CSS Property: text-overflow = ellipsis** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
281	`white-space: nowrap;`	**CSS Property: white-space = nowrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
282	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
283		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
284	`/* Element: sidebar__role */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
285	`.sidebar__role {`	**Execute: .sidebar__role {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
286	`font-size: 0.625rem;`	**CSS Property: font-size = 0.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
287	`/* text-[10px] */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
288	`color: var(--secondary);`	**CSS Property: color = var(--secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
289	`    overflow: hidden;`	**CSS Property: overflow = hidden** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
290	`    text-overflow: ellipsis;`	**CSS Property: text-overflow = ellipsis** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
291	`    white-space: nowrap;`	**CSS Property: white-space = nowrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
292	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
293		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
294	`/* Element: sidebar__settings */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
295	`.sidebar__settings {`	**Execute: .sidebar__settings {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
296	`padding-left: 0.5rem;`	**CSS Property: padding-left = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
297	`/* 2 * 0.25rem = 0.5rem */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
298	`padding-right: 0.5rem;`	**CSS Property: padding-right = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
299	`padding-top: 0.5rem;`	**CSS Property: padding-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
300	`padding-bottom: 0.5rem;`	**CSS Property: padding-bottom = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
301	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
302	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
303	`gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
304	`/* 3 * 0.25rem = 0.75rem */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
305	`    color: var(--secondary);`	**CSS Property: color = var(--secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
306	`    transition: all var(--transition-base, 200ms ease-in-out);`	**CSS Property: transition = all var(--transition-base, 200ms ease-in-out)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
307	`    font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
308	`    /* text-xs */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
309	`    font-weight: var(--font-medium, 500);`	**CSS Property: font-weight = var(--font-medium, 500)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
310	`    text-decoration: none;`	**CSS Property: text-decoration = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
311	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
312		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
313	`/* Pseudo-class: hover state for setti ngs link */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
314	`.sidebar__settings:hover {`	**CSS Property: .sidebar__settings = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
315	`color: var(--primary);`	**CSS Property: color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
316	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
317		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
318	`/* Element: sidebar__logout */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
319	`.sidebar__logout {`	**Execute: .sidebar__logout {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
320	`width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
321	`padding-left: 0.5rem;`	**CSS Property: padding-left = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
322	`/* 2 * 0.25rem = 0.5rem */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
323	`padding-right: 0.5rem;`	**CSS Property: padding-right = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
324	`padding-top: 0.5rem;`	**CSS Property: padding-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
325	`padding-bottom: 0.5rem;`	**CSS Property: padding-bottom = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
326	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
327	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
328	`gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
329	`/* 3 * 0.25rem = 0.75rem */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
330	`color: rgba(239, 68, 68, 0.8);`	**CSS Property: color = rgba(239, 68, 68, 0.8)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
331	`/* text-red-500/80 */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
332	`transition: all var(--transition-base, 200ms ease-in-out);`	**CSS Property: transition = all var(--transition-base, 200ms ease-in-out)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
333	`font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
334	`/* text-xs */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
335	`font-weight: var(--font-medium, 500);`	**CSS Property: font-weight = var(--font-medium, 500)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
336	`    background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
337	`    border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
338	`    cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
339	`    text-align: left;`	**CSS Property: text-align = left** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
340	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
341		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
342	`/* Pseudo-class: hover state for logou t button */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
343	`.sidebar__logout:hover {`	**CSS Property: .sidebar__logout = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
344	`color: rgb(239, 68, 68);`	**CSS Property: color = rgb(239, 68, 68)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
345	`/* text-red-500 */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
346	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`import { Link } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
2	`import { MessageSquare } from 'lucide-react';`	**Import Dependency: lucide-react** **WHY:** Brings lucide-react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
3	`import { timeAgo, getInitials, getAvatarColor, isAuthoredByUser } from '../../lib/utils';`	**Import Dependency: ../../lib/utils** **WHY:** Brings ../../lib/utils into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
4	`import styles from './QuestionCard.module.css';`	**Import Dependency: ./QuestionCard.module.css** **WHY:** Brings ./QuestionCard.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
5		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
6	`/**`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
7	`* Strips markdown markup to create a clean preview snippet.`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
8	`*/`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
9	`function cleanSnippet(text, maxLength = 160) {`	**Execute: function cleanSnippet(text, maxLength = 160) ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
10	`  if (!text) return '';`	**Execute: if (!text) return '';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
11	`  const cleaned = text`	**Declare Local Identifier: cleaned** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
12	`    .replace(/#+\s/g, '')`	**Execute: .replace(/#+\s/g, '')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	` .replace(/```[\s\S]*?```/g, ' [code] ')`	**Execute: .replace(/```[\s\S]*?```/g, ' [code] ')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`    .replace(/`([^`]+)`/g, '$1')`	**Execute: .replace(/`([^`]+)`/g, '$1')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
15	`    .replace(/\[([^\]]+)\]\([^)]+\)/g, '$1')`	**Execute: .replace(/\[([^\]]+)\]\([^)]+\)/g, '$1')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
16	`.replace(/[*_~]/g, '')`	**Execute: .replace(/[*_~]/g, '')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
17	`.replace(/\s+/g, ' ')`	**Execute: .replace(/\s+/g, ' ')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
18	`.trim();`	**Execute: .trim();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
19	`  return cleaned.length > maxLength ? cleaned.slice(0, maxLength) + '...' : cleaned;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
20	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
21		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
22	`export default function QuestionCard({ question, currentUser }) {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
23	`  if (!question) return null;`	**Execute: if (!question) return null;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
24		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
25	`  const isOwner = isAuthoredByUser(question, currentUser);`	**Declare Local Identifier: isOwner** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
26	`  const hash = question.questionHash || question.id;`	**Declare Local Identifier: hash** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
27	`  const authorFirst = question.author?.firstName || question.firstName || 'Anonymous';`	**Declare Local Identifier: authorFirst** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28	`  const authorLast = question.author?.lastName || question.lastName || '';`	**Declare Local Identifier: authorLast** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
29	`  const initials = getInitials(authorFirst, authorLast);`	**Declare Local Identifier: initials** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
30	`  const avatarTheme = getAvatarColor(authorFirst + authorLast + (question.author?.id || ''));`	**Declare Local Identifier: avatarTheme** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
31	`  const answerCount = question.answerCount ?? question.answers?.length ?? 0;`	**Declare Local Identifier: answerCount** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
32	`  const relativeDate = timeAgo(question.createdAt);`	**Declare Local Identifier: relativeDate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
33	`  const byLabel = isOwner ? 'You' : `${authorFirst} ${authorLast}`.trim();`	**Declare Local Identifier: byLabel** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

28	`justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
29	`font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
30	`font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
31	`flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
32	`letter-spacing: -0.02em;`	**CSS Property: letter-spacing = -0.02em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
33	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
34		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
35	`.body {`	**Execute: .body {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
36	`  flex: 1;`	**CSS Property: flex = 1** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
37	`  min-width: 0;`	**CSS Property: min-width = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
38	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
39		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
40	`.headerRow {`	**Execute: .headerRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
41	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
42	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
43	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
44	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
45	`  margin-bottom: 0.375rem;`	**CSS Property: margin-bottom = 0.375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
46	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
47		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
48	`.title {`	**Execute: .title {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
49	`  font-size: 1rem;`	**CSS Property: font-size = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
50	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
51	`  line-height: 1.4;`	**CSS Property: line-height = 1.4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
52	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
53	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
54	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
55		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
56	`.titleLink {`	**Execute: .titleLink {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
57	`  color: inherit;`	**CSS Property: color = inherit** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
58	`  text-decoration: none;`	**CSS Property: text-decoration = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
59	`  transition: color 0.15s ease;`	**CSS Property: transition = color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
60	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
61		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
62	`.titleLink:hover {`	**CSS Property: .titleLink = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
63	`  color: var(--primary, #f97316);`	**CSS Property: color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
64	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
65		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
66	`.yoursBadge {`	**Execute: .yoursBadge {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
67	`  font-size: 0.6875rem;`	**CSS Property: font-size = 0.6875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
68	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
69	`  padding: 0.15rem 0.5rem;`	**CSS Property: padding = 0.15rem 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
70	`  background-color: var(--primary-light, #ffedd5);`	**CSS Property: background-color = var(--primary-light, #ffedd5)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
71	`  color: var(--primary-dark, #c2410c);`	**CSS Property: color = var(--primary-dark, #c2410c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
72	`  border-radius: var(--radius-sm, 0.25rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
73	`  letter-spacing: 0.04em;`	**CSS Property: letter-spacing = 0.04em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
74	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
75	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
76		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
77	`.excerpt {`	**Execute: .excerpt {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
78	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
79	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
80	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
81	`  margin: 0 0 0.75rem 0;`	**CSS Property: margin = 0 0 0.75rem 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
82	`  word-break: break-word;`	**CSS Property: word-break = break-word** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
83	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
84		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
85	`.footer {`	**Execute: .footer {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
86	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
87	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
88	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
89	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`/**`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
2	`* Renders RAG "answer" text as Markdown (incl. fenced code) with readable styling.`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
3	`*/`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
4	`import { useCallback, useRef, useState } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
5	`import ReactMarkdown from 'react-markdown';`	**Import Dependency: react-markdown** **WHY:** Brings react-markdown into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`import { Copy, Check } from 'lucide-react';`	**Import Dependency: lucide-react** **WHY:** Brings lucide-react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
7	`import styles from './RagAnswerBody.module.css';`	**Import Dependency: ./RagAnswerBody.module.css** **WHY:** Brings ./RagAnswerBody.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
8		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
9	`/**`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
10	`* @param {{ children: string }} props`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
11	`*/`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
12	`export default function RagAnswerBody ({ children }) {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
13	`  const text = typeof children === 'st ring' ? children : '';`	**Declare Local Identifier: text** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
14	`  if (!text.trim()) return null;`	**Execute: if (!text.trim()) return null;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
15		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
16	`  return (`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17	`<div className={styles.root}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

75	`  border-radius: var(--radius-sm);`	**CSS Property: border-radius = var(--radius-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
76	`  font-size: 0.8125em;`	**CSS Property: font-size = 0.8125em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
77	`  font-family: ui-monospace, SFMono-Regular, 'SF Mono', Menlo, Consolas,`	**CSS Property: font-family = ui-monospace, SFMono-Regular, 'SF Mono', Menlo, Consolas,** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
78	`    monospace;`	**Execute: monospace;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
79	`  background-color: var(--surface-container-high);`	**CSS Property: background-color = var(--surface-container-high)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
80	`  color: var(--tertiary);`	**CSS Property: color = var(--tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
81	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
82		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
83	`.codeWrap {`	**Execute: .codeWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
84	`  margin: var(--spacing-md) 0;`	**CSS Property: margin = var(--spacing-md) 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
85	`  border-radius: var(--radius-lg);`	**CSS Property: border-radius = var(--radius-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
86	`  border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
87	`  overflow: hidden;`	**CSS Property: overflow = hidden** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
88	`  background-color: var(--tertiary);`	**CSS Property: background-color = var(--tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
89	`  box-shadow: var(--shadow-md);`	**CSS Property: box-shadow = var(--shadow-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
90	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
91		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
92	`.codeToolbar {`	**Execute: .codeToolbar {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
93	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
94	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
95	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
96	`  gap: var(--spacing-sm);`	**CSS Property: gap = var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
97	`  padding: var(--spacing-xs) var(--spacing-sm);`	**CSS Property: padding = var(--spacing-xs) var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
98	`  background-color: rgba(0, 0, 0, 0.2);`	**CSS Property: background-color = rgba(0, 0, 0, 0.2)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
99	`  border-bottom: 1px solid rgba(255, 255, 255, 0.08);`	**CSS Property: border-bottom = 1px solid rgba(255, 255, 255, 0.08)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
100	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
101		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
102	`.codeLang {`	**Execute: .codeLang {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
103	`  font-size: 0.625rem;`	**CSS Property: font-size = 0.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
104	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
105	`  letter-spacing: 0.06em;`	**CSS Property: letter-spacing = 0.06em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
106	`  text-transform: uppercase;`	**CSS Property: text-transform = uppercase** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
107	`  color: rgba(255, 255, 255, 0.55);`	**CSS Property: color = rgba(255, 255, 255, 0.55)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
108	`  font-family: ui-monospace, SFMono-Regular, Menlo, Consolas, monospace;`	**CSS Property: font-family = ui-monospace, SFMono-Regular, Menlo, Consolas, monospace** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
109	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
110		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
111	`.copyBtn {`	**Execute: .copyBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
112	`display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
113	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
114	`gap: 0.25rem;`	**CSS Property: gap = 0.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
115	`padding: 0.25rem 0.5rem;`	**CSS Property: padding = 0.25rem 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
116	`font-size: var(--text-xs);`	**CSS Property: font-size = var(--text-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
117	`  font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
118	`  font-family: inherit;`	**CSS Property: font-family = inherit** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
119	`  color: rgba(255, 255, 255, 0.85);`	**CSS Property: color = rgba(255, 255, 255, 0.85)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
120	`  background: rgba(255, 255, 255, 0.1);`	**CSS Property: background = rgba(255, 255, 255, 0.1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
121	`  border: 1px solid rgba(255, 255, 255, 0.15);`	**CSS Property: border = 1px solid rgba(255, 255, 255, 0.15)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
122	`  border-radius: var(--radius-sm);`	**CSS Property: border-radius = var(--radius-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
123	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
124	`  transition:`	**CSS Property: transition =** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
125	`    background-color var(--transition-fast),`	**Execute: background-color var(--transition-fast),** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
126	`    color var(--transition-fast);`	**Execute: color var(--transition-fast);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
127	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
128		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
129	`.copyBtn:hover {`	**CSS Property: .copyBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
130	`  background: rgba(255, 255, 255, 0.18);`	**CSS Property: background = rgba(255, 255, 255, 0.18)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
131	`  color: #fff;`	**CSS Property: color = #fff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
132	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
133		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
134	`.copyBtn:focus-visible {`	**CSS Property: .copyBtn = focus-visible {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
135	`  outline: 2px solid var(--primary);`	**CSS Property: outline = 2px solid var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
136	`  outline-offset: 2px;`	**CSS Property: outline-offset = 2px** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
137	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
138		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
139	`.pre {`	**Execute: .pre {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
140	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
141	`  padding: var(--spacing-md);`	**CSS Property: padding = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
142	`  overflow-x: auto;`	**CSS Property: overflow-x = auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
143	`  max-height: min(24rem, 55vh);`	**CSS Property: max-height = min(24rem, 55vh)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
144	`  overflow-y: auto;`	**CSS Property: overflow-y = auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
145	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
146		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
147	`.pre code {`	**Execute: .pre code {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
148	`  display: block;`	**CSS Property: display = block** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
149	`  font-family: ui-monospace, SFMono-Regular, 'SF Mono', Menlo, Consolas,`	**CSS Property: font-family = ui-monospace, SFMono-Regular, 'SF Mono', Menlo, Consolas,** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
150	`    monospace;`	**Execute: monospace;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
151	`  font-size: var(--text-xs);`	**CSS Property: font-size = var(--text-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
152	`  line-height: 1.55;`	**CSS Property: line-height = 1.55** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
153	`  color: #e2e8f0;`	**CSS Property: color = #e2e8f0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
154	`  white-space: pre;`	**CSS Property: white-space = pre** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
155	`  background: transparent !important;`	**CSS Property: background = transparent !important** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
156	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
157		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`/**`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
2	`* @file Landing.jsx`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
3	`* @description Public marketing route (`/`). Layout and copy align with in-app`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
4	`*  shell tokens (cards, borders, slate + orange). No data fetching.`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
5	`*/`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`import { motion as Motion } from 'framer-motion';`	**Import Dependency: framer-motion** **WHY:** Brings framer-motion into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
7	`import { useNavigate } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
8	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
9	`  Sparkles,`	**Execute: Sparkles,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`  MessageSquare,`	**Execute: MessageSquare,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
11	`Search,`	**Execute: Search,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
12	`PenSquare,`	**Execute: PenSquare,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`Library,`	**Execute: Library,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`ArrowRight,`	**Execute: ArrowRight,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
15	`CheckCircle2,`	**Execute: CheckCircle2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
16	`Layers,`	**Execute: Layers,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17	`  FileText,`	**Execute: FileText,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
18	`  Database,`	**Execute: Database,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
19	`} from 'lucide-react';`	**Execute: } from 'lucide-react';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
20	`import { useAuth } from '../../contexts/AuthContext';`	**Import Dependency: ../../contexts/AuthContext** **WHY:** Brings ../../contexts/AuthContext into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
21	`import styles from './Landing.module.css';`	**Import Dependency: ./Landing.module.css** **WHY:** Brings ./Landing.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
22		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
23	`export default function Landing() {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
24	`  const navigate = useNavigate();`	**Declare Local Identifier: navigate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
25	`  const { isAuthenticated } = useAuth();`	**Declare Local Identifier: { isAuthenticated }** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
26		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
27	`  const scrollToHowItWorks = () => {`	**Declare Local Identifier: scrollToHowItWorks** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28	`document`	**Execute: document** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
29	`.getElementById('how-it-works')`	**Execute: .getElementById('how-it-works')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
30	`?.scrollIntoView({ behavior: 'smooth' });`	**Execute: ?.scrollIntoView({ behavior: 'smooth' });** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
31	`};`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
32		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
33	`const scrollToCourseRag = () => {`	**Declare Local Identifier: scrollToCourseRag** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
34	`document`	**Execute: document** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
35	`.getElementById('course-rag')`	**Execute: .getElementById('course-rag')** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
36	`?.scrollIntoView({ behavior: 'smooth' });`	**Execute: ?.scrollIntoView({ behavior: 'smooth' });** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
37	`};`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
38		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
39	`return (`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
40	`<div className={styles.landing}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
41	`<header className={styles.landing__header}>`	**Execute: <header className={styles.landing__header}>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
42	`<div className={styles.landing__headerInner}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
43	`<button`	**Execute: <button** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
44	`type='button'`	**Execute: type='button'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
45	`className={styles.landing__brand}`	**Execute: className={styles.landing__brand}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
46	`onClick={() ⇒ navigate('/')}`	**Execute: onClick={() ⇒ navigate('/')}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
47	`aria-label='Evangadi Forum home'`	**Execute: aria-label='Evangadi Forum home'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
48	`>`	**Execute: >** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
49	`<span className={styles.landing__brandMark} aria-hidden>`	**Execute: <span className={styles.landing__brandMark} a...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
50	`<MessageSquare size={20} strokeWidth={2} />`	**Execute: <MessageSquare size={20} strokeWidth={2} />** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
51	`</span>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
52	`<span className={styles.landing__brandText}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
53	`<span className={styles.landing__brandName}>Evangadi Forum</span>`	**Execute: E...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
54	`<span className={styles.landing__brandLine}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
55	`Learn together. Ask with context.`	**Execute: Learn together. Ask with context.** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
56	`</span>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
57	`</span>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

Uses same tokens as Layout/Dashboard/Auth:`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
3	`* --surface, --background, --border, --radius-*, --text-*, --primary.`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
4	`* Width: --app-content-max for horizontal rhythm with `.layout__mainInner`.`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
5	`*/`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
6		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
7	`.landing {`	**Execute: .landing {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
8	`min-height: 100vh;`	**CSS Property: min-height = 100vh** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
9	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
10	`flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
11	`  background-color: var(--background);`	**CSS Property: background-color = var(--background)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
12	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
13	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
14		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
15	`/* Header */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
16	`.landing__header {`	**Execute: .landing__header {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
17	`  position: sticky;`	**CSS Property: position = sticky** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
18	`  top: 0;`	**CSS Property: top = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
19	`  z-index: 50;`	**CSS Property: z-index = 50** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
20	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
21	`  border-bottom: 1px solid var(--border);`	**CSS Property: border-bottom = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
22	`  box-shadow: var(--shadow-sm);`	**CSS Property: box-shadow = var(--shadow-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
23	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
24		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
25	`.landing__headerInner {`	**Execute: .landing__headerInner {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
26	`  max-width: var(--app-content-max, 80rem);`	**CSS Property: max-width = var(--app-content-max, 80rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
27	`  margin: 0 auto;`	**CSS Property: margin = 0 auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
28	`  padding: var(--spacing-md) var(--spacing-lg);`	**CSS Property: padding = var(--spacing-md) var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
29	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
30	`  flex-wrap: wrap;`	**CSS Property: flex-wrap = wrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
31	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
32	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
33	`  gap: var(--spacing-md);`	**CSS Property: gap = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
34	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
35		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
36	`.landing__brand {`	**Execute: .landing__brand {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
37	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
38	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
39	`gap: var(--spacing-md);`	**CSS Property: gap = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
40	`background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
41	`border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
42	`cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
43	`text-align: left;`	**CSS Property: text-align = left** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
44	`padding: var(--spacing-xs);`	**CSS Property: padding = var(--spacing-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
45	`  margin: calc(-1 * var(--spacing-xs));`	**CSS Property: margin = calc(-1 * var(--spacing-xs))** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
46	`  border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
47	`  transition: background-color var(--transition-fast);`	**CSS Property: transition = background-color var(--transition-fast)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
48	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
49		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
50	`.landing__brand:hover {`	**CSS Property: .landing__brand = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
51	`  background-color: var(--surface-hover);`	**CSS Property: background-color = var(--surface-hover)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
52	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
53		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
54	`.landing__brand:focus-visible {`	**CSS Property: .landing__brand = focus-visible {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
55	`  outline: 2px solid var(--primary);`	**CSS Property: outline = 2px solid var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
56	`  outline-offset: 2px;`	**CSS Property: outline-offset = 2px** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
57	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
58		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
59	`.landing__brandMark {`	**Execute: .landing__brandMark {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
60	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
61	`width: 2.375rem;`	**CSS Property: width = 2.375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
62	`height: 2.375rem;`	**CSS Property: height = 2.375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
63	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
64	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
65	`justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
66	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
67	`  background: linear-gradient(`	**CSS Property: background = linear-gradient(** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
68	`    145deg,`	**Execute: 145deg,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
69	`    var(--primary) 0%,`	**Execute: var(--primary) 0%,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
70	`    var(--primary-hover) 100%`	**Execute: var(--primary-hover) 100%** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
71	`  );`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
72	`  color: var(--text-inverse);`	**CSS Property: color = var(--text-inverse)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
73	`  box-shadow: 0 1px 2px rgba(15, 23, 42, 0.08);`	**CSS Property: box-shadow = 0 1px 2px rgba(15, 23, 42, 0.08)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
74	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
75		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
76	`.landing__brandText {`	**Execute: .landing__brandText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
77	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
78	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
79	`  gap: 0.125rem;`	**CSS Property: gap = 0.125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
80	`  min-width: 0;`	**CSS Property: min-width = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
81	`  padding-top: 0.125rem;`	**CSS Property: padding-top = 0.125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
82	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
83		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
84	`.landing__brandName {`	**Execute: .landing__brandName {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
85	`font-size: var(--text-base);`	**CSS Property: font-size = var(--text-base)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
86	`font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
87	`color: var(--tertiary);`	**CSS Property: color = var(--tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
88	`letter-spacing: -0.02em;`	**CSS Property: letter-spacing = -0.02em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
89	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
90		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
91	`.landing__brandLine {`	**Execute: .landing__brandLine {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
92	`  font-size: 0.6875rem;`	**CSS Property: font-size = 0.6875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
93	`  color: var(--text-tertiary);`	**CSS Property: color = var(--text-tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
94	`  line-height: 1.35;`	**CSS Property: line-height = 1.35** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
95	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
96		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
97	`.landing__nav {`	**Execute: .landing__nav {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
98	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
99	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
100	`  gap: var(--spacing-xs);`	**CSS Property: gap = var(--spacing-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
101	`  flex: 1 1 auto;`	**CSS Property: flex = 1 1 auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
102	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
103	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
104		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
105	`@media (min-width: 900px) {`	**Execute: @media (min-width: 900px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
106	`  .landing__nav {`	**Execute: .landing__nav {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
107	`    flex: 0 1 auto;`	**CSS Property: flex = 0 1 auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
108	`    justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
109	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
110	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
111		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
112	`.landing__navLink {`	**Execute: .landing__navLink {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
113	`  padding: var(--spacing-sm) var(--spacing-md);`	**CSS Property: padding = var(--spacing-sm) var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
114	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
115	`  font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
116	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
117	`  background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
118	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
119	`  border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
120	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
121	`  transition: color var(--transition-fast),`	**CSS Property: transition = color var(--transition-fast),** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
122	`    background-color var(--transition-fast);`	**Execute: background-color var(--transition-fast);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
123	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
124		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
125	`.landing__navLink:hover {`	**CSS Property: .landing__navLink = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
126	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
127	`  background-color: var(--surface-container-low);`	**CSS Property: background-color = var(--surface-container-low)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
128	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
129		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
130	`.landing__headerActions {`	**Execute: .landing__headerActions {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
131	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
132	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
133	`  gap: var(--spacing-sm);`	**CSS Property: gap = var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
134	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
135	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
136		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
137	`/* Buttons */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
138	`.landing__btnPrimary {`	**Execute: .landing__btnPrimary {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
139	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
140	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
141	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
142	`  gap: var(--spacing-sm);`	**CSS Property: gap = var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
143	`  padding: var(--spacing-sm) var(--spacing-lg);`	**CSS Property: padding = var(--spacing-sm) var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
144	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
145	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
146	`color: var(--text-inverse);`	**CSS Property: color = var(--text-inverse)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
147	`background-color: var(--primary);`	**CSS Property: background-color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
148	`border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
149	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
150	`cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
151	`box-shadow: var(--shadow-sm);`	**CSS Property: box-shadow = var(--shadow-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
152	`  transition: background-color var(--transition-fast),`	**CSS Property: transition = background-color var(--transition-fast),** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
153	`    box-shadow var(--transition-fast);`	**Execute: box-shadow var(--transition-fast);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
154	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
196		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
197	`/* Main */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
198	`.landing__main {`	**Execute: .landing__main {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
199	`  flex: 1;`	**CSS Property: flex = 1** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
200	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
201		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
202	`.landing__sectionInner {`	**Execute: .landing__sectionInner {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
203	`  max-width: var(--app-content-max, 80rem);`	**CSS Property: max-width = var(--app-content-max, 80rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
204	`  margin: 0 auto;`	**CSS Property: margin = 0 auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
205	`  padding-left: var(--spacing-lg);`	**CSS Property: padding-left = var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
206	`  padding-right: var(--spacing-lg);`	**CSS Property: padding-right = var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
207	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
208		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
209	`/* Hero */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
210	`.landing__hero {`	**Execute: .landing__hero {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
211	`padding: var(--spacing-2xl) 0 var(--spacing-3xl);`	**CSS Property: padding = var(--spacing-2xl) 0 var(--spacing-3xl)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
212	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
213	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
214		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
292		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
293	`.landing__heroPanelLabel {`	**Execute: .landing__heroPanelLabel {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
294	`  margin: 0 0 var(--spacing-md);`	**CSS Property: margin = 0 0 var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
295	`  font-size: var(--text-xs);`	**CSS Property: font-size = var(--text-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
296	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
297	`  text-transform: uppercase;`	**CSS Property: text-transform = uppercase** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
298	`  letter-spacing: 0.06em;`	**CSS Property: letter-spacing = 0.06em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
299	`  color: var(--text-tertiary);`	**CSS Property: color = var(--text-tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
300	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
301		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
302	`.landing__heroPanelList {`	**Execute: .landing__heroPanelList {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
303	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
304	`  padding: 0;`	**CSS Property: padding = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
305	`  list-style: none;`	**CSS Property: list-style = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
306	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
307	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
308	`  gap: var(--spacing-md);`	**CSS Property: gap = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
309	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
310		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
311	`.landing__heroPanelList li {`	**Execute: .landing__heroPanelList li {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
312	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
313	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
314	`  gap: var(--spacing-sm);`	**CSS Property: gap = var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
315	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
316	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
317	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
318	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
319		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
320	`.landing__heroPanelList svg {`	**Execute: .landing__heroPanelList svg {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
321	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
322	`  margin-top: 0.125rem;`	**CSS Property: margin-top = 0.125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
323	`  color: var(--primary);`	**CSS Property: color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
324	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
325		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
326	`.landing__heroPanelStrong {`	**Execute: .landing__heroPanelStrong {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
327	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
328	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
329	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
330		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
331	`/* Course RAG (all visitors) */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
332	`.landing__rag {`	**Execute: .landing__rag {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
333	`  padding: var(--spacing-3xl) 0;`	**CSS Property: padding = var(--spacing-3xl) 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
334	`  background-color: var(--surface-container-low);`	**CSS Property: background-color = var(--surface-container-low)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
335	`  border-top: 1px solid var(--border);`	**CSS Property: border-top = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
336	`  box-shadow: inset 0 1px 0 rgba(255, 255, 255, 0.6);`	**CSS Property: box-shadow = inset 0 1px 0 rgba(255, 255, 255, 0.6)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
337	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
338		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
339	`.landing__ragEyebrow {`	**Execute: .landing__ragEyebrow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
340	`  margin: 0 0 var(--spacing-sm);`	**CSS Property: margin = 0 0 var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
341	`  font-size: 0.625rem;`	**CSS Property: font-size = 0.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
342	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
343	`  letter-spacing: 0.1em;`	**CSS Property: letter-spacing = 0.1em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
344	`  text-transform: uppercase;`	**CSS Property: text-transform = uppercase** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
345	`  color: var(--primary-dark);`	**CSS Property: color = var(--primary-dark)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
346	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
347		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
348	`.landing__rag .landing__sectionLead em {`	**Execute: .landing__rag .landing__sectionLead em {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
349	`  font-style: normal;`	**CSS Property: font-style = normal** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
350	`  font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
351	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
352	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
353		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
354	`.landing__ragPipeline {`	**Execute: .landing__ragPipeline {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
355	`  display: grid;`	**CSS Property: display = grid** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
356	`  gap: var(--spacing-lg);`	**CSS Property: gap = var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
357	`  margin-bottom: var(--spacing-xl);`	**CSS Property: margin-bottom = var(--spacing-xl)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
358	`  grid-template-columns: 1fr;`	**CSS Property: grid-template-columns = 1fr** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
359	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
360		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
361	`@media (min-width: 900px) {`	**Execute: @media (min-width: 900px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
362	`  .landing__ragPipeline {`	**Execute: .landing__ragPipeline {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
363	`    grid-template-columns: repeat(3, 1fr);`	**CSS Property: grid-template-columns = repeat(3, 1fr)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
364	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
365	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
366		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
367	`.landing__ragStep {`	**Execute: .landing__ragStep {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
368	`  padding: var(--spacing-lg);`	**CSS Property: padding = var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
369	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
370	`  border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
371	`  border-radius: var(--radius-lg);`	**CSS Property: border-radius = var(--radius-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
372	`  box-shadow: var(--shadow-sm);`	**CSS Property: box-shadow = var(--shadow-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
373	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
374		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
375	`.landing__ragStepIcon {`	**Execute: .landing__ragStepIcon {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
376	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
377	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
378	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
379	`  width: 2.5rem;`	**CSS Property: width = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
380	`  height: 2.5rem;`	**CSS Property: height = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
381	`  margin-bottom: var(--spacing-md);`	**CSS Property: margin-bottom = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
382	`  border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
383	`  background-color: var(--primary-light);`	**CSS Property: background-color = var(--primary-light)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
384	`  color: var(--primary-dark);`	**CSS Property: color = var(--primary-dark)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
385	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 386		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
387	`.landing__ragStepTitle {`	**Execute: .landing__ragStepTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
388	`  margin: 0 0 var(--spacing-xs);`	**CSS Property: margin = 0 0 var(--spacing-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
389	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
390	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
391	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
392	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
393		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
394	`.landing__ragStepText {`	**Execute: .landing__ragStepText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
395	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
396	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
397	`  line-height: 1.55;`	**CSS Property: line-height = 1.55** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
398	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
399	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
400		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
401	`.landing__ragFootnote {`	**Execute: .landing__ragFootnote {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
402	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
403	`  padding: var(--spacing-md) var(--spacing-lg);`	**CSS Property: padding = var(--spacing-md) var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
404	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
405	`  line-height: 1.55;`	**CSS Property: line-height = 1.55** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
406	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
407	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
408	`  border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
409	`  border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
410	`  border-left: 3px solid var(--primary);`	**CSS Property: border-left = 3px solid var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
411	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
412		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
413	`.landing__ragFootnote strong {`	**Execute: .landing__ragFootnote strong {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
414	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
415	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
416	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
417		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
418	`/* Capabilities */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
419	`.landing__capabilities {`	**Execute: .landing__capabilities {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
420	`  padding: var(--spacing-3xl) 0;`	**CSS Property: padding = var(--spacing-3xl) 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
421	`  background-color: var(--background);`	**CSS Property: background-color = var(--background)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
422	`  border-top: 1px solid var(--border);`	**CSS Property: border-top = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
423	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
424		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
425	`.landing__sectionTitle {`	**Execute: .landing__sectionTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
426	`  margin: 0 0 var(--spacing-sm);`	**CSS Property: margin = 0 0 var(--spacing-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
427	`  font-size: var(--text-xl);`	**CSS Property: font-size = var(--text-xl)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
428	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
429	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
430	`  letter-spacing: -0.02em;`	**CSS Property: letter-spacing = -0.02em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

477	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
478	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
479	`justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
480	`margin-bottom: var(--spacing-md);`	**CSS Property: margin-bottom = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
481	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
482	`  background-color: var(--surface-container-low);`	**CSS Property: background-color = var(--surface-container-low)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
483	`  color: var(--primary);`	**CSS Property: color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
484	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
485		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
486	`.landing__cardTitle {`	**Execute: .landing__cardTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
487	`  margin: 0 0 var(--spacing-xs);`	**CSS Property: margin = 0 0 var(--spacing-xs)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
488	`  font-size: var(--text-base);`	**CSS Property: font-size = var(--text-base)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
489	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
490	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
491	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
492		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
493	`.landing__cardBody {`	**Execute: .landing__cardBody {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
494	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
495	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
496	`  line-height: 1.55;`	**CSS Property: line-height = 1.55** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
497	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
498	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
499		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
500	`/* Process */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
501	`.landing__process {`	**Execute: .landing__process {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
502	`  padding: var(--spacing-3xl) 0;`	**CSS Property: padding = var(--spacing-3xl) 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
503	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
504	`  border-top: 1px solid var(--border);`	**CSS Property: border-top = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
505	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
506		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
507	`.landing__steps {`	**Execute: .landing__steps {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
508	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
509	`  padding: 0;`	**CSS Property: padding = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
510	`  list-style: none;`	**CSS Property: list-style = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
511	`  display: grid;`	**CSS Property: display = grid** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
512	`  gap: var(--spacing-lg);`	**CSS Property: gap = var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
513	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
514		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
515	`@media (min-width: 768px) {`	**Execute: @media (min-width: 768px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
516	`  .landing__steps {`	**Execute: .landing__steps {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
517	`    grid-template-columns: repeat(2, 1fr);`	**CSS Property: grid-template-columns = repeat(2, 1fr)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
518	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
519	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
520		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
521	`.landing__step {`	**Execute: .landing__step {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
522	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
523	`gap: var(--spacing-md);`	**CSS Property: gap = var(--spacing-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
524	`padding: var(--spacing-lg);`	**CSS Property: padding = var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
525	`background-color: var(--background);`	**CSS Property: background-color = var(--background)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
526	`border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
527	`border-radius: var(--radius-lg);`	**CSS Property: border-radius = var(--radius-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
528	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

576	`  font-size: var(--text-xl);`	**CSS Property: font-size = var(--text-xl)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
577	`  font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
578	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
579	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
580		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
581	`.landing__ctaText {`	**Execute: .landing__ctaText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
582	`  margin: 0 auto var(--spacing-lg);`	**CSS Property: margin = 0 auto var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
583	`  max-width: 28rem;`	**CSS Property: max-width = 28rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
584	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
585	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
586	`  line-height: 1.55;`	**CSS Property: line-height = 1.55** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
587	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
588		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
589	`/* Signed-in strip */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
590	`.landing__welcomeBack {`	**Execute: .landing__welcomeBack {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
591	`  padding: var(--spacing-3xl) 0;`	**CSS Property: padding = var(--spacing-3xl) 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
592	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
593	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
594		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
595	`.landing__welcomeBack .landing__sectionInner {`	**Execute: .landing__welcomeBack .landing__sectionInner ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
596	`  padding: var(--spacing-2xl) var(--spacing-lg);`	**CSS Property: padding = var(--spacing-2xl) var(--spacing-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
597	`  background-color: var(--background);`	**CSS Property: background-color = var(--background)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
598	`  border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
599	`  border-radius: var(--radius-lg);`	**CSS Property: border-radius = var(--radius-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
600	`  max-width: 40rem;`	**CSS Property: max-width = 40rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
601	`  margin-left: auto;`	**CSS Property: margin-left = auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
602	`  margin-right: auto;`	**CSS Property: margin-right = auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
603	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
675		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
676	`.landing__footerDot {`	**Execute: .landing__footerDot {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
677	`  color: var(--text-placeholder);`	**CSS Property: color = var(--text-placeholder)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
678	`  user-select: none;`	**CSS Property: user-select = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
679	}	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
680		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`/**`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
2	`* Auth: combined login + register form; switches mode without changing routes.`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
3	`*/`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
4	`import { useState } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
5		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`import { motion as Motion, AnimatePresence } from 'framer-motion';`	**Import Dependency: framer-motion** **WHY:** Brings framer-motion into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
7	`import { useNavigate, useLocation } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
8	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
9	`  Sparkles,`	**Execute: Sparkles,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`  Code,`	**Execute: Code,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
11	`ArrowRight,`	**Execute: ArrowRight,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
12	`Eye,`	**Execute: Eye,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`EyeOff,`	**Execute: EyeOff,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`MessageSquare,`	**Execute: MessageSquare,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
15	`} from 'lucide-react';`	**Execute: } from 'lucide-react';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
16	`import { useAuth } from '../../contexts/AuthContext';`	**Import Dependency: ../../contexts/AuthContext** **WHY:** Brings ../../contexts/AuthContext into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17	`import styles from './Auth.module.css';`	**Import Dependency: ./Auth.module.css** **WHY:** Brings ./Auth.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
18		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
19	`export default function Auth() {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
20	`  const navigate = useNavigate();`	**Declare Local Identifier: navigate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
21	`  const location = useLocation();`	**Declare Local Identifier: location** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
22	`  const { register, login } = useAuth();`	**Declare Local Identifier: { register, login }** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
23	`  const [isLogin, setIsLogin] = useState(true);`	**Declare React State: isLogin** **WHY:** Allows the component to remember dynamic data (isLogin) and automatically re-render the user interface whenever setIsLogin() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
24		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
25	`  // Registration form state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
26	`  const [firstName, setFirstName] = useState('');`	**Declare React State: firstName** **WHY:** Allows the component to remember dynamic data (firstName) and automatically re-render the user interface whenever setFirstName() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
27	`  const [lastName, setLastName] = useState('');`	**Declare React State: lastName** **WHY:** Allows the component to remember dynamic data (lastName) and automatically re-render the user interface whenever setLastName() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28	`  const [email, setEmail] = useState('');`	**Declare React State: email** **WHY:** Allows the component to remember dynamic data (email) and automatically re-render the user interface whenever setEmail() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
29	`  const [password, setPassword] = useState('');`	**Declare React State: password** **WHY:** Allows the component to remember dynamic data (password) and automatically re-render the user interface whenever setPassword() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
30	`  const [showPassword, setShowPassword] = useState(false);`	**Declare React State: showPassword** **WHY:** Allows the component to remember dynamic data (showPassword) and automatically re-render the user interface whenever setShowPassword() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
31		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
32	`  // Error and loading state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
33	`  const [error, setError] = useState(null);`	**Declare React State: error** **WHY:** Allows the component to remember dynamic data (error) and automatically re-render the user interface whenever setError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
34	`  const [loading, setLoading] = useState(false);`	**Declare React State: loading** **WHY:** Allows the component to remember dynamic data (loading) and automatically re-render the user interface whenever setLoading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
35	`  const [successMessage, setSuccessMessage] = useState(null);`	**Declare React State: successMessage** **WHY:** Allows the component to remember dynamic data (successMessage) and automatically re-render the user interface whenever setSuccessMessage() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
36		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
37	`  // Handle form submission for both login and registration`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
38	`  const handleSubmit = async e => {`	**Declare Local Identifier: handleSubmit** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
39	`    e.preventDefault();`	**Execute: e.preventDefault();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
40	`    setError(null);`	**Execute: setError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
41	`    setSuccessMessage(null);`	**Execute: setSuccessMessage(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
42	`    const normalizedEmail = email.trim().toLowerCase();`	**Declare Local Identifier: normalizedEmail** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
43	`    // regex for email validation`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
44	`    const emailPattern = /^[^\s@]+@[^\s@]+\.[^\s@]+$/;`	**Declare Local Identifier: emailPattern** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
45		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
46	`    if (!normalizedEmail) {`	**Execute: if (!normalizedEmail) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
47	`        setError('Email is required.');`	**Execute: setError('Email is required.');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
48	`        return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
49	`    }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
50		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
51	`    if (!emailPattern.test(normalizedEmail)) {`	**Execute: if (!emailPattern.test(normalizedEmail)) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
52	`        setError('Please enter a valid email address.');`	**Execute: setError('Please enter a valid email address....** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
53	`        return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
54	`    }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
55		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
56	`if (!password.trim()) {`	**Execute: if (!password.trim()) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
57	`setError('Password is required.');`	**Execute: setError('Password is required.');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
58	`return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.

Any local variables declared in this block that have no remaining references become eligible for garbage collection.
86		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
87	`    setLoading(true);`	**Execute: setLoading(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
88		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
89	`    try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
90	`if (isLogin) {`	**Execute: if (isLogin) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
91	`// Login flow`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
92	`await login({ email: normalizedEmail, password });`	**Execute: await login({ email: normalizedEmail, passwor...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
93	`setSuccessMessage('Sign-in successful. Redirecting...');`	**Execute: setSuccessMessage('Sign-in successful. Redire...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
94	`// Clear form fields`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
95	`setEmail('');`	**Execute: setEmail('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
96	`setPassword('');`	**Execute: setPassword('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
97	`setShowPassword(false);`	**Execute: setShowPassword(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
98	`// Delay redirect to show successful message`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
99	`await new Promise(resolve => setTimeout(resolve, 1000));`	**Execute: await new Promise(resolve => setTimeout(resol...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
100		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
101	`// Check location state for original URL after login`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
102	`// Redirect to original URL if present, otherwise dashboard`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
103	`const from = location.state?.from?.pathname || '/dashboard';`	**Declare Local Identifier: from** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
104	`navigate(from, { replace: true });`	**Execute: navigate(from, { replace: true });** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
105	`} else {`	**Execute: } else {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
106	`// Registration flow`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
107	`await register({`	**Execute: await register({** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
108	`firstName: trimmedFirstName,`	**Execute: firstName: trimmedFirstName,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
109	`lastName: trimmedLastName,`	**Execute: lastName: trimmedLastName,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
110	`email: normalizedEmail,`	**Execute: email: normalizedEmail,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
111	`password,`	**Execute: password,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
112	`});`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
113	`setSuccessMessage('Registration successful! Please log in.');`	**Execute: setSuccessMessage('Registration successful! P...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
114	`// Clear form fields`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
115	`setFirstName('');`	**Execute: setFirstName('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
116	`setLastName('');`	**Execute: setLastName('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
117	`setEmail('');`	**Execute: setEmail('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
118	`setPassword('');`	**Execute: setPassword('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
119	`// Automatically switch to log in form after 1.5 seconds`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
120	`setTimeout(() => {`	**Execute: setTimeout(() => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
121	`setIsLogin(true);`	**Execute: setIsLogin(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
122	`setSuccessMessage(null);`	**Execute: setSuccessMessage(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
123	`}, 1500);`	**Execute: }, 1500);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
124	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
125	`    } catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
126	`      setError(err.message || 'An unexpected error occurred.');`	**Execute: setError(err.message || 'An unexpected error ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
127	`    } finally {`	**Execute: } finally {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
128	`      setLoading(false);`	**Execute: setLoading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
129	`    }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
130	`  };`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
131		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
132	`  return (`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
133	`    <div className={styles.auth}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
134	`      {/* Left: Info Section */}`	**Execute: {/* Left: Info Section */}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
135	`      <section className={styles.auth__info}>`	**Execute: <section className={styles.auth__info}>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
136	`<div className={styles.auth__infoContent}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
137	`<header className={styles.auth__infoHeader}>`	**Execute: <header className={styles.auth__infoHeader}>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
138	`<div`	**Execute: <div** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
139	`className={styles.auth__infoBranding}`	**Execute: className={styles.auth__infoBranding}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
140	`onClick={() => navigate('/')}`	**Execute: onClick={() => navigate('/')}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
141	`title='Go to Home'`	**Execute: title='Go to Home'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
142	`role='button'`	**Execute: role='button'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
143	`tabIndex={0}`	**Execute: tabIndex={0}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
144	`onKeyDown={e => {`	**Execute: onKeyDown={e => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
145	`if (e.key === 'Enter' || e.key === ' ') {`	**Execute: if (e.key === 'Enter' || e.key === ' ') {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
146	`e.preventDefault();`	**Execute: e.preventDefault();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
147	`navigate('/');`	**Execute: navigate('/');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
148	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 11	`@media (min-width: 768px) {`	**Execute: @media (min-width: 768px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
12	`  .auth {`	**Execute: .auth {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`    flex-direction: row;`	**CSS Property: flex-direction = row** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
14	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
15	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
16		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
17	`/* Info Section (Left Side) */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
18	`.auth__info {`	**Execute: .auth__info {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
19	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
20	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
21	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
22	`  padding: 3rem 1.5rem;`	**CSS Property: padding = 3rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
23	`  background: linear-gradient(`	**CSS Property: background = linear-gradient(** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
24	`    155deg,`	**Execute: 155deg,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
25	`    var(--primary) 0%,`	**Execute: var(--primary) 0%,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
26	`    var(--primary-hover) 48%,`	**Execute: var(--primary-hover) 48%,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
27	`    var(--primary-dark) 100%`	**Execute: var(--primary-dark) 100%** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28	`  );`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 106	`.auth__infoTagline {`	**Execute: .auth__infoTagline {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
107	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
108	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
109	`  font-weight: var(--font-normal);`	**CSS Property: font-weight = var(--font-normal)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
110	`  line-height: 1.4;`	**CSS Property: line-height = 1.4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
111	`  color: rgba(255, 255, 255, 0.88);`	**CSS Property: color = rgba(255, 255, 255, 0.88)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
112	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
113		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
114	`.auth__infoDescription {`	**Execute: .auth__infoDescription {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
115	`  margin: var(--spacing-lg) 0 0;`	**CSS Property: margin = var(--spacing-lg) 0 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
116	`  font-size: var(--text-base);`	**CSS Property: font-size = var(--text-base)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
117	`  opacity: 0.92;`	**CSS Property: opacity = 0.92** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
118	`  line-height: 1.65;`	**CSS Property: line-height = 1.65** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
119	`  color: rgba(255, 255, 255, 0.95);`	**CSS Property: color = rgba(255, 255, 255, 0.95)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
120	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
121		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
122	`/* Features Section */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
123	`.auth__features {`	**Execute: .auth__features {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
124	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
125	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
126	`  gap: 1.5rem;`	**CSS Property: gap = 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
127	`  margin-bottom: 3rem;`	**CSS Property: margin-bottom = 3rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
128	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
129		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
130	`.auth__feature {`	**Execute: .auth__feature {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
131	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
132	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
133	`  padding: 1.5rem;`	**CSS Property: padding = 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
134	`  background-color: rgba(255, 255, 255, 0.08);`	**CSS Property: background-color = rgba(255, 255, 255, 0.08)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
135	`  border: 1px solid rgba(255, 255, 255, 0.14);`	**CSS Property: border = 1px solid rgba(255, 255, 255, 0.14)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
136	`  border-radius: var(--radius-lg);`	**CSS Property: border-radius = var(--radius-lg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
137	`  backdrop-filter: blur(10px);`	**CSS Property: backdrop-filter = blur(10px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
138	`  transition:`	**CSS Property: transition =** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
139	`    background-color var(--transition-base),`	**Execute: background-color var(--transition-base),** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
140	`    border-color var(--transition-base),`	**Execute: border-color var(--transition-base),** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
141	`    transform var(--transition-base);`	**Execute: transform var(--transition-base);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
142	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
143		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
144	`.auth__feature:hover {`	**CSS Property: .auth__feature = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
145	`  background-color: rgba(255, 255, 255, 0.12);`	**CSS Property: background-color = rgba(255, 255, 255, 0.12)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
146	`  border-color: rgba(255, 255, 255, 0.22);`	**CSS Property: border-color = rgba(255, 255, 255, 0.22)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
147	`  transform: translateX(0.125rem);`	**CSS Property: transform = translateX(0.125rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
148	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
149		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
150	`.auth__featureIcon {`	**Execute: .auth__featureIcon {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
151	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
152	`  width: 2.5rem;`	**CSS Property: width = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
153	`  height: 2.5rem;`	**CSS Property: height = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
154	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
155	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
156	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
157	`  background-color: rgba(255, 255, 255, 0.2);`	**CSS Property: background-color = rgba(255, 255, 255, 0.2)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
158	`  border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
159	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
160		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

198	`  height: 2.5rem;`	**CSS Property: height = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
199	`  border-radius: 50%;`	**CSS Property: border-radius = 50%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
200	`  border: 2px solid white;`	**CSS Property: border = 2px solid white** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
201	`  margin-left: -0.5rem;`	**CSS Property: margin-left = -0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
202	`  object-fit: cover;`	**CSS Property: object-fit = cover** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
203	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
204		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
205	`.auth__infoBadge {`	**Execute: .auth__infoBadge {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
206	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
207	`  font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
208	`  padding: 0.375rem 0.75rem;`	**CSS Property: padding = 0.375rem 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
209	`  background-color: rgba(255, 255, 25 5, 0.2);`	**CSS Property: background-color = rgba(255, 255, 255, 0.2)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
210	`  border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
211	`  backdrop-filter: blur(10px);`	**CSS Property: backdrop-filter = blur(10px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
212	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
213		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
214	`/* Form Section (Right Side) */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
215	`.auth__formSection {`	**Execute: .auth__formSection {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
216	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
217	`  flex: 1;`	**CSS Property: flex = 1** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
218	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
219	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
220	`  padding: 2rem 1.5rem;`	**CSS Property: padding = 2rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
221	`  background-color: var(--background);`	**CSS Property: background-color = var(--background)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
222	`  background-image: radial-gradient(`	**CSS Property: background-image = radial-gradient(** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
223	`    ellipse 120% 80% at 50% 0%,`	**Execute: ellipse 120% 80% at 50% 0%,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
224	`    rgba(255, 237, 213, 0.45) 0%,`	**Execute: rgba(255, 237, 213, 0.45) 0%,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
225	`    transparent 55%`	**Execute: transparent 55%** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
226	`  );`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
227	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
228		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
229	`@media (min-width: 768px) {`	**Execute: @media (min-width: 768px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
230	`.auth__formSection {`	**Execute: .auth__formSection {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
231	`width: 55%;`	**CSS Property: width = 55%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
232	`padding: 4rem;`	**CSS Property: padding = 4rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
233	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
234	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
235		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
236	`.auth__formContainer {`	**Execute: .auth__formContainer {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
237	`  width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
238	`  max-width: var(--app-form-max, 28rem);`	**CSS Property: max-width = var(--app-form-max, 28rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
239	`  padding: var(--spacing-xl);`	**CSS Property: padding = var(--spacing-xl)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
240	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
241	`  border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
242	`  border-radius: var(--radius-xl);`	**CSS Property: border-radius = var(--radius-xl)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
243	`  box-shadow:`	**CSS Property: box-shadow =** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
244	`    var(--shadow-md),`	**Execute: var(--shadow-md),** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
245	`    inset 0 1px 0 rgba(255, 255, 255, 0.75);`	**Execute: inset 0 1px 0 rgba(255, 255, 255, 0.75);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
246	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
247		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
248	`@media (min-width: 768px) {`	**Execute: @media (min-width: 768px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

291	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
292	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
293	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
294	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
295		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
296	`.auth__label {`	**Execute: .auth__label {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
297	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
298	`  font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
299	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
300	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
301		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
302	`.auth__labelLink {`	**Execute: .auth__labelLink {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
303	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
304	`  color: var(--primary);`	**CSS Property: color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
305	`  text-decoration: none;`	**CSS Property: text-decoration = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
306	`  transition: var(--transition-fast);`	**CSS Property: transition = var(--transition-fast)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
307	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
308		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
309	`.auth__labelLink:hover {`	**CSS Property: .auth__labelLink = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
310	`  color: var(--primary-container);`	**CSS Property: color = var(--primary-container)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
311	`  text-decoration: underline;`	**CSS Property: text-decoration = underline** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
312	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
313		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
314	`.auth__input {`	**Execute: .auth__input {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
315	`  width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
316	`padding: 0.75rem 1rem;`	**CSS Property: padding = 0.75rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
317	`font-size: var(--text-base);`	**CSS Property: font-size = var(--text-base)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
318	`color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
319	`background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
320	`border: 1px solid var(--border);`	**CSS Property: border = 1px solid var(--border)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
321	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
322	`  outline: none;`	**CSS Property: outline = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
323	`  transition: var(--transition-fast);`	**CSS Property: transition = var(--transition-fast)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
324	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
325		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
326	`.auth__input::placeholder {`	**CSS Property: .auth__input = :placeholder {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
327	`  color: var(--text-tertiary);`	**CSS Property: color = var(--text-tertiary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
328	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
329		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
330	`.auth__input:hover {`	**CSS Property: .auth__input = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
331	`  border-color: var(--border-hover);`	**CSS Property: border-color = var(--border-hover)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
332	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
333		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
334	`.auth__passwordWrap {`	**Execute: .auth__passwordWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
335	`  position: relative;`	**CSS Property: position = relative** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
336	`  width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
337	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
338		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
339	`.auth__inputPassword {`	**Execute: .auth__inputPassword {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
340	`  padding-right: 2.75rem;`	**CSS Property: padding-right = 2.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
341	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
342		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
343	`.auth__passwordToggle {`	**Execute: .auth__passwordToggle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
344	`position: absolute;`	**CSS Property: position = absolute** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
345	`right: 0.5rem;`	**CSS Property: right = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
346	`top: 50%;`	**CSS Property: top = 50%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
347	`transform: translateY(-50%);`	**CSS Property: transform = translateY(-50%)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
348	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
349	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
350	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
351	`  padding: 0.25rem;`	**CSS Property: padding = 0.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
352	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
353	`  background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
354	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
355	`  border-radius: var(--radius-sm);`	**CSS Property: border-radius = var(--radius-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
356	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
357	`  transition: var(--transition-fast);`	**CSS Property: transition = var(--transition-fast)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
358	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
359		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
360	`.auth__passwordToggle:hover {`	**CSS Property: .auth__passwordToggle = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
361	`  color: var(--text-primary);`	**CSS Property: color = var(--text-primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
362	`  background-color: var(--surface-container-low);`	**CSS Property: background-color = var(--surface-container-low)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
363	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
364		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
365	`.auth__passwordToggle:focus {`	**CSS Property: .auth__passwordToggle = focus {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
366	`  outline: none;`	**CSS Property: outline = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
367	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
368		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
369	`.auth__passwordToggle:focus-visible {`	**CSS Property: .auth__passwordToggle = focus-visible {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
370	`  outline: 2px solid var(--primary);`	**CSS Property: outline = 2px solid var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
371	`  outline-offset: 2px;`	**CSS Property: outline-offset = 2px** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
372	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
373		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
374	`/* Button Container */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
375	`.auth__buttonContainer {`	**Execute: .auth__buttonContainer {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
376	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
377	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
378		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
379	`/* Error Message */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
380	`.auth__error {`	**Execute: .auth__error {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
381	`padding: 0.75rem 1rem;`	**CSS Property: padding = 0.75rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
382	`font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
383	`color: #dc2626;`	**CSS Property: color = #dc2626** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
384	`background-color: #fef2f2;`	**CSS Property: background-color = #fef2f2** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
385	`border: 1px solid #fecaca;`	**CSS Property: border = 1px solid #fecaca** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
386	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
387	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
388	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
389		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
390	`/* Success Message */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
391	`.auth__success {`	**Execute: .auth__success {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
392	`padding: 0.75rem 1rem;`	**CSS Property: padding = 0.75rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
393	`font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
394	`color: #16a34a;`	**CSS Property: color = #16a34a** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
395	`background-color: #f0fdf4;`	**CSS Property: background-color = #f0fdf4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
396	`border: 1px solid #bbf7d0;`	**CSS Property: border = 1px solid #bbf7d0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
397	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
398	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
399	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
400		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
401	`/* Buttons */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
402	`.auth__button {`	**Execute: .auth__button {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
403	`width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
404	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
405	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
406	`justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
407	`gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
408	`padding: 0.75rem 1.5rem;`	**CSS Property: padding = 0.75rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
409	`font-size: var(--text-base);`	**CSS Property: font-size = var(--text-base)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
410	`font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
411	`border-radius: var(--radius-md);`	**CSS Property: border-radius = var(--radius-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
412	`border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
413	`cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
414	`transition: var(--transition-fast);`	**CSS Property: transition = var(--transition-fast)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
415	`  outline: none;`	**CSS Property: outline = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
416	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
417		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
418	`.auth__button:active {`	**CSS Property: .auth__button = active {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
419	`  transform: scale(0.98);`	**CSS Property: transform = scale(0.98)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
420	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
421		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
422	`/* Primary Button */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
423	`.auth__button--primary {`	**Execute: .auth__button--primary {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
424	`  background-color: var(--primary);`	**CSS Property: background-color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
425	`  color: white;`	**CSS Property: color = white** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
426	`  box-shadow: var(--shadow-sm);`	**CSS Property: box-shadow = var(--shadow-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
427	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
428		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
429	`.auth__button--primary:hover {`	**CSS Property: .auth__button--primary = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
430	`  background-color: var(--primary-container);`	**CSS Property: background-color = var(--primary-container)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
431	`  box-shadow: var(--shadow-md);`	**CSS Property: box-shadow = var(--shadow-md)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
432	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 485	`display: inline-block;`	**CSS Property: display = inline-block** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
486	`padding: 0 1rem;`	**CSS Property: padding = 0 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
487	`font-size: 0.625rem;`	**CSS Property: font-size = 0.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
488	`font-weight: var(--font-semibold);`	**CSS Property: font-weight = var(--font-semibold)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
489	`letter-spacing: 0.08em;`	**CSS Property: letter-spacing = 0.08em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
490	`  text-transform: uppercase;`	**CSS Property: text-transform = uppercase** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
491	`  color: var(--text-placeholder);`	**CSS Property: color = var(--text-placeholder)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
492	`  background-color: var(--surface);`	**CSS Property: background-color = var(--surface)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
493	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
494		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
495	`/* Social Buttons Container */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
496	`.auth__socialButtons {`	**Execute: .auth__socialButtons {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
497	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
498	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
499	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
500		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
501	`/* Form Footer */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
502	`.auth__formFooter {`	**Execute: .auth__formFooter {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
503	`  margin-top: 1.75rem;`	**CSS Property: margin-top = 1.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
504	`  text-align: left;`	**CSS Property: text-align = left** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
505	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
506		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
507	`.auth__formFooterText {`	**Execute: .auth__formFooterText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
508	`  font-size: var(--text-sm);`	**CSS Property: font-size = var(--text-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
509	`  color: var(--text-secondary);`	**CSS Property: color = var(--text-secondary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
510	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
511	`  flex-wrap: wrap;`	**CSS Property: flex-wrap = wrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
512	`  align-items: baseline;`	**CSS Property: align-items = baseline** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
513	`  justify-content: flex-start;`	**CSS Property: justify-content = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
514	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
515	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
516		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
517	`.auth__formFooterLink {`	**Execute: .auth__formFooterLink {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
518	`  color: var(--primary);`	**CSS Property: color = var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
519	`  font-weight: var(--font-medium);`	**CSS Property: font-weight = var(--font-medium)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
520	`  background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
521	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
522	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
523	`  padding: 0;`	**CSS Property: padding = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
524	`  text-decoration: none;`	**CSS Property: text-decoration = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
525	`  transition: var(--transition-fast);`	**CSS Property: transition = var(--transition-fast)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
526	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
527		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
528	`.auth__formFooterLink:hover {`	**CSS Property: .auth__formFooterLink = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
529	`  color: var(--primary-container);`	**CSS Property: color = var(--primary-container)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
530	`  text-decoration: underline;`	**CSS Property: text-decoration = underline** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
531	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
532		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
533	`.auth__formFooterLink:focus {`	**CSS Property: .auth__formFooterLink = focus {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
534	`  outline: 2px solid var(--primary);`	**CSS Property: outline = 2px solid var(--primary)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
535	`  outline-offset: 2px;`	**CSS Property: outline-offset = 2px** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
536	`  border-radius: var(--radius-sm);`	**CSS Property: border-radius = var(--radius-sm)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
537	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
538		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`import { useState, useEffect, useMemo, useCallback } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
2	`import { useNavigate, useSearchParams } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
3	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
4	`  PenSquare,`	**Execute: PenSquare,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
5	`  MessageSquare,`	**Execute: MessageSquare,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`BookOpen,`	**Execute: BookOpen,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
7	`Sparkles,`	**Execute: Sparkles,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
8	`Search,`	**Execute: Search,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
9	`X,`	**Execute: X,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`RefreshCw,`	**Execute: RefreshCw,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
11	`AlertCircle,`	**Execute: AlertCircle,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
12	`  ArrowRight,`	**Execute: ArrowRight,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`} from 'lucide-react';`	**Execute: } from 'lucide-react';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`import { useAuth } from '../../contexts/AuthContext';`	**Import Dependency: ../../contexts/AuthContext** **WHY:** Brings ../../contexts/AuthContext into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
15	`import { questionService } from '../../services/question/question.service';`	**Import Dependency: ../../services/question/question.service** **WHY:** Brings ../../services/question/question.service into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
16	`import QuestionCard from '../../components/QuestionCard/QuestionCard';`	**Import Dependency: ../../components/QuestionCard/QuestionCard** **WHY:** Brings ../../components/QuestionCard/QuestionCard into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17	`import { isAuthoredByUser } from '../../lib/utils';`	**Import Dependency: ../../lib/utils** **WHY:** Brings ../../lib/utils into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
18	`import styles from './Dashboard.module.css';`	**Import Dependency: ./Dashboard.module.css** **WHY:** Brings ./Dashboard.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
19		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
20	`export default function Dashboard() {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
21	`  const { user } = useAuth();`	**Declare Local Identifier: { user }** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
22	`  const navigate = useNavigate();`	**Declare Local Identifier: navigate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
23	`  const [searchParams, setSearchParams] = useSearchParams();`	**Declare Local Identifier: [searchParams, setSearchParams]** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
24		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
25	`  const [questions, setQuestions] = useState([]);`	**Declare React State: questions** **WHY:** Allows the component to remember dynamic data (questions) and automatically re-render the user interface whenever setQuestions() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
26	`  const [loading, setLoading] = useState(true);`	**Declare React State: loading** **WHY:** Allows the component to remember dynamic data (loading) and automatically re-render the user interface whenever setLoading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
27	`  const [error, setError] = useState(null);`	**Declare React State: error** **WHY:** Allows the component to remember dynamic data (error) and automatically re-render the user interface whenever setError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
29	`  const keywordQuery = searchParams.get('q') || '';`	**Declare Local Identifier: keywordQuery** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
30	`  const semanticQuery = searchParams.get('semantic') || '';`	**Declare Local Identifier: semanticQuery** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
31	`  const isSearchActive = Boolean(keywordQuery || semanticQuery);`	**Declare Local Identifier: isSearchActive** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
32		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
33	`  const fetchQuestions = useCallback(async () => {`	**Declare Local Identifier: fetchQuestions** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
34	`setLoading(true);`	**Execute: setLoading(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
35	`setError(null);`	**Execute: setError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
36	`try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
37	`if (semanticQuery.trim()) {`	**Execute: if (semanticQuery.trim()) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
38	`const res = await questionService.searchQuestionsSemantic(semanticQuery.trim());`	**Declare Local Identifier: res** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
39	`setQuestions(res.questions);`	**Execute: setQuestions(res.questions);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
40	`} else if (keywordQuery.trim()) {`	**Execute: } else if (keywordQuery.trim()) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
41	`const res = await questionService.getQuestions({ search: keywordQuery.trim() });`	**Declare Local Identifier: res** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
42	`setQuestions(res.questions);`	**Execute: setQuestions(res.questions);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
43	`} else {`	**Execute: } else {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
44	`const res = await questionService.getQuestions();`	**Declare Local Identifier: res** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
45	`setQuestions(res.questions);`	**Execute: setQuestions(res.questions);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
46	`        }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
47	`    } catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
48	`        console.error('Failed to load questions:', err);`	**Execute: console.error('Failed to load questions:', er...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
49	`        setError(err.message || 'Unable to load discussion questions.');`	**Execute: setError(err.message || 'Unable to load discu...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
50	`    } finally {`	**Execute: } finally {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
51	`setLoading(false);`	**Execute: setLoading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
52	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
53	`}, [keywordQuery, semanticQuery]);`	**Execute: }, [keywordQuery, semanticQuery]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
54		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
55	`useEffect(() => {`	**Declare React Side-Effect (useEffect)** **WHY:** Executes asynchronous side-effects (data fetching, subscriptions, timer management, DOM mutations) outside the main render calculation. **WHEN:** Runs after the component renders and commits to the screen, depending on its dependency array. **HOW:** React schedules the effect callback to run in the microtask queue after paint, preventing render blocking.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
56	`    fetchQuestions();`	**Execute: fetchQuestions();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
57	`  }, [fetchQuestions]);`	**Execute: }, [fetchQuestions]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
58		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
59	`  const clearSearch = () => {`	**Declare Local Identifier: clearSearch** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
60	`    setSearchParams({});`	**Execute: setSearchParams({});** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
61	`  };`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
62		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
63	`  // Metrics computation for stats row`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
64	`  const stats = useMemo(() => {`	**Declare Local Identifier: stats** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
65	`    const totalQuestions = questions.length;`	**Declare Local Identifier: totalQuestions** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
66	`    let totalReplies = 0;`	**Declare Local Identifier: totalReplies** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
67	`    let unanswered = 0;`	**Declare Local Identifier: unanswered** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
68	`    let authoredByMe = 0;`	**Declare Local Identifier: authoredByMe** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
69		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
70	`    questions.forEach(q => {`	**Execute: questions.forEach(q => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
71	`        const count = q.answerCount ?? q.answers?.length ?? 0;`	**Declare Local Identifier: count** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
72	`        totalReplies += count;`	**Execute: totalReplies += count;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
73	`        if (count === 0) unanswered += 1;`	**Execute: if (count === 0) unanswered += 1;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
74	`if (isAuthoredByUser(q, user)) authoredByMe += 1;`	**Execute: if (isAuthoredByUser(q, user)) authoredByMe +...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
75	`});`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
76		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
77	`return {`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
78	`totalQuestions,`	**Execute: totalQuestions,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
79	`totalReplies,`	**Execute: totalReplies,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
80	`unanswered,`	**Execute: unanswered,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
81	`authoredByMe,`	**Execute: authoredByMe,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
82	`};`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 42	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
43	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
44	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
45	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
46		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
47	`/* Quick Action Tiles */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
48	`.quickTiles {`	**Execute: .quickTiles {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
49	`  display: grid;`	**CSS Property: display = grid** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
50	`  grid-template-columns: repeat(3, 1fr);`	**CSS Property: grid-template-columns = repeat(3, 1fr)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
51	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
52	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
53		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
54	`@media (max-width: 900px) {`	**Execute: @media (max-width: 900px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
55	`  .quickTiles {`	**Execute: .quickTiles {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
56	`    grid-template-columns: 1fr;`	**CSS Property: grid-template-columns = 1fr** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
57	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
58	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
59		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
60	`.quickTile {`	**Execute: .quickTile {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
61	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
62	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
63	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
64	`  padding: 1.125rem 1.25rem;`	**CSS Property: padding = 1.125rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
65	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
66	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
67	`  border-radius: var(--radius-lg, 0.75rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
68	`  text-align: left;`	**CSS Property: text-align = left** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
69	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
70	`  transition: all 0.15s ease;`	**CSS Property: transition = all 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
71	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
72		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
73	`.quickTile:hover {`	**CSS Property: .quickTile = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
74	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
75	`  border-color: var(--primary, #f97316);`	**CSS Property: border-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
76	`  box-shadow: var(--shadow-sm, 0 1px 2px rgba(0, 0, 0, 0.05));`	**CSS Property: box-shadow = var(--shadow-sm, 0 1px 2px rgba(0, 0, 0, 0.05))** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
77	`  transform: translateY(-1px);`	**CSS Property: transform = translateY(-1px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
78	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
79		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
80	`.quickTileIconWrap {`	**Execute: .quickTileIconWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
81	`  width: 2.5rem;`	**CSS Property: width = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
82	`  height: 2.5rem;`	**CSS Property: height = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
83	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
84	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
85	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
86	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
87	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
88	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
89	`  color: var(--primary, #f97316);`	**CSS Property: color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
90	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
91	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
137		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
138	`.statCard {`	**Execute: .statCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
139	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
140	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
141	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
142	`  padding: 0.875rem 1rem;`	**CSS Property: padding = 0.875rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
143	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
144	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
145	`  gap: 0.25rem;`	**CSS Property: gap = 0.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
146	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
147		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
148	`.statName {`	**Execute: .statName {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
149	`  font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
150	`  font-weight: 500;`	**CSS Property: font-weight = 500** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
151	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
152	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
153		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
154	`.statValue {`	**Execute: .statValue {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
155	`  font-size: 1.5rem;`	**CSS Property: font-size = 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
156	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
157	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
158	`  letter-spacing: -0.02em;`	**CSS Property: letter-spacing = -0.02em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
159	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
160		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
161	`/* Feed Section */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
162	`.feedSection {`	**Execute: .feedSection {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
163	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
164	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
165	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
166	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
167		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
168	`.feedHeader {`	**Execute: .feedHeader {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
169	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
170	`  align-items: flex-end;`	**CSS Property: align-items = flex-end** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
171	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
172	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
173	`  flex-wrap: wrap;`	**CSS Property: flex-wrap = wrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
174	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
175		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
176	`.feedTitle {`	**Execute: .feedTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
177	`  font-size: 1.25rem;`	**CSS Property: font-size = 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
178	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
179	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
180	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
181	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
182		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
183	`.feedSubtitle {`	**Execute: .feedSubtitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
184	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
185	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
186	`  margin: 0.25rem 0 0 0;`	**CSS Property: margin = 0.25rem 0 0 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

231		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
232	`/* Question List */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
233	`.questionList {`	**Execute: .questionList {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
234	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
235	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
236	`  gap: 0.875rem;`	**CSS Property: gap = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
237	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
238		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
239	`/* Loading Skeleton */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
240	`.loadingContainer {`	**Execute: .loadingContainer {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
241	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
242	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
243	`  gap: 0.875rem;`	**CSS Property: gap = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
244	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
245		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
246	`.skeletonCard {`	**Execute: .skeletonCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
247	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
248	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
249	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
250	`  padding: 1.25rem 1.5rem;`	**CSS Property: padding = 1.25rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
251	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
252	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
253	`  border-radius: var(--radius-lg, 0.75rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
254	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 324		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
325	`.errorContent {`	**Execute: .errorContent {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
326	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
327	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
328	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
329	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
330		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
331	`.errorMessage {`	**Execute: .errorMessage {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
332	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
333	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
334	`  font-weight: 500;`	**CSS Property: font-weight = 500** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
335	`  color: #991b1b;`	**CSS Property: color = #991b1b** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
336	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
337		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
338	`.retryBtn {`	**Execute: .retryBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
339	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
340	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
341	`gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
342	`font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
343	`font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
344	`padding: 0.35rem 0.75rem;`	**CSS Property: padding = 0.35rem 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
345	`background-color: #ffffff;`	**CSS Property: background-color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
346	`border: 1px solid #f87171;`	**CSS Property: border = 1px solid #f87171** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
347	`  border-radius: var(--radius-sm, 0.25 rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
348	`  color: #b91c1c;`	**CSS Property: color = #b91c1c** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
349	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
350	`  align-self: flex-start;`	**CSS Property: align-self = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
351	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
352		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
353	`.retryBtn:hover {`	**CSS Property: .retryBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
354	`  background-color: #fef2f2;`	**CSS Property: background-color = #fef2f2** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
355	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
356		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
357	`/* Empty State */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
358	`.emptyCard {`	**Execute: .emptyCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
359	`  padding: 3rem 2rem;`	**CSS Property: padding = 3rem 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
360	`  text-align: center;`	**CSS Property: text-align = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
361	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
362	`  border: 1px dashed var(--border, #e2e8f0);`	**CSS Property: border = 1px dashed var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
363	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
364	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
365	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
366	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
367	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
368	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
369	`  max-width: 36rem;`	**CSS Property: max-width = 36rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
370	`  margin: 1rem auto;`	**CSS Property: margin = 1rem auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
371	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
372		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
373	`.emptyIconWrap {`	**Execute: .emptyIconWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
374	`  width: 3.5rem;`	**CSS Property: width = 3.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
375	`  height: 3.5rem;`	**CSS Property: height = 3.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
376	`  border-radius: var(--radius-full, 9999px);`	**CSS Property: border-radius = var(--radius-full, 9999px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
377	`  background-color: var(--surface-container-low, #f1f5f9);`	**CSS Property: background-color = var(--surface-container-low, #f1f5f9)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
378	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
379	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
380	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
381	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
382	`  margin-bottom: 0.5rem;`	**CSS Property: margin-bottom = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
383	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
384		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
385	`.emptyTitle {`	**Execute: .emptyTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
386	`  font-size: 1.125rem;`	**CSS Property: font-size = 1.125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
387	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
388	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
389	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
390	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
391		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
392	`.emptyText {`	**Execute: .emptyText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
393	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
394	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
395	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
396	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
397	`  max-width: 28rem;`	**CSS Property: max-width = 28rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

418		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
419	`.emptyPrimaryBtn:hover {`	**CSS Property: .emptyPrimaryBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
420	`  background-color: var(--primary-hover, #ea580c);`	**CSS Property: background-color = var(--primary-hover, #ea580c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
421	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
422		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
423	`.emptySecondaryBtn {`	**Execute: .emptySecondaryBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
424	`  padding: 0.5rem 1rem;`	**CSS Property: padding = 0.5rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
425	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
426	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
427	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
428	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
429	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
430	`  font-weight: 500;`	**CSS Property: font-weight = 500** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
431	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
432	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
433		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
434	`.emptySecondaryBtn:hover {`	**CSS Property: .emptySecondaryBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
435	`  background-color: var(--surface-hover, #f8fafc);`	**CSS Property: background-color = var(--surface-hover, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
436	}	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
437		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`import { useState, useRef } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
2	`import { useNavigate } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
3	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
4	`  Sparkles,`	**Execute: Sparkles,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
5	`  Send,`	**Execute: Send,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`Bold,`	**Execute: Bold,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
7	`Italic,`	**Execute: Italic,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
8	`Code,`	**Execute: Code,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
9	`Link as LinkIcon,`	**Execute: Link as LinkIcon,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`AlertCircle,`	**Execute: AlertCircle,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
11	`CheckCircle2,`	**Execute: CheckCircle2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
12	`  X,`	**Execute: X,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`  Loader2,`	**Execute: Loader2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`} from 'lucide-react';`	**Execute: } from 'lucide-react';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
15	`import { questionService } from '../../services/question/question.service';`	**Import Dependency: ../../services/question/question.service** **WHY:** Brings ../../services/question/question.service into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
16	`import styles from './PostQuestion.module.css';`	**Import Dependency: ./PostQuestion.module.css** **WHY:** Brings ./PostQuestion.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
18	`export default function PostQuestion() {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
19	`  const navigate = useNavigate();`	**Declare Local Identifier: navigate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
20	`  const textareaRef = useRef(null);`	**Declare Mutable React Reference (useRef)** **WHY:** Holds a direct reference to a DOM element (e.g. textarea, file input) or a persistent mutable value without triggering re-renders on change. **WHEN:** Created on component initialization. **HOW:** Returns a stable object { current: initialValue } that persists across all re-renders of the component.
21		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
22	`  const [title, setTitle] = useState('');`	**Declare React State: title** **WHY:** Allows the component to remember dynamic data (title) and automatically re-render the user interface whenever setTitle() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
23	`  const [content, setContent] = useState('');`	**Declare React State: content** **WHY:** Allows the component to remember dynamic data (content) and automatically re-render the user interface whenever setContent() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
24		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
25	`  // Validation errors`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
26	`  const [touched, setTouched] = useState({ title: false, content: false });`	**Declare React State: touched** **WHY:** Allows the component to remember dynamic data (touched) and automatically re-render the user interface whenever setTouched() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
27	`  const [generalError, setGeneralError] = useState(null);`	**Declare React State: generalError** **WHY:** Allows the component to remember dynamic data (generalError) and automatically re-render the user interface whenever setGeneralError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
29	`  // AI Draft Coach state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
30	`  const [coachLoading, setCoachLoadin g] = useState(false);`	**Declare React State: coachLoading** **WHY:** Allows the component to remember dynamic data (coachLoading) and automatically re-render the user interface whenever setCoachLoading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
31	`  const [coachTips, setCoachTips] = u seState(null);`	**Declare React State: coachTips** **WHY:** Allows the component to remember dynamic data (coachTips) and automatically re-render the user interface whenever setCoachTips() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
32	`  const [coachError, setCoachError] = useState(null);`	**Declare React State: coachError** **WHY:** Allows the component to remember dynamic data (coachError) and automatically re-render the user interface whenever setCoachError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
33		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
34	`  // Form submission state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
35	`  const [submitting, setSubmitting] = useState(false);`	**Declare React State: submitting** **WHY:** Allows the component to remember dynamic data (submitting) and automatically re-render the user interface whenever setSubmitting() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
36		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
37	`  // Validation rules`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
38	`  const isTitleValid = title.trim().length >= 5 && title.trim().length <= 255;`	**Declare Local Identifier: isTitleValid** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
39	`  const isContentValid = content.trim().length >= 10;`	**Declare Local Identifier: isContentValid** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
40	`  const titleError =`	**Declare Local Identifier: titleError** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
41	`    touched.title && !isTitleValid`	**Execute: touched.title && !isTitleValid** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
42	`      ? 'Question title must be at least 5 characters'`	**Execute: ? 'Question title must be at least 5 characte...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
43	`      : null;`	**Execute: : null;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
44	`  const contentError =`	**Declare Local Identifier: contentError** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
45	`    touched.content && !isContentValid`	**Execute: touched.content && !isContentValid** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
46	`      ? 'Question content must be at least 10 characters'`	**Execute: ? 'Question content must be at least 10 chara...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
47	`      : null;`	**Execute: : null;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
48		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
49	`  // Markdown formatting tool helper`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
50	`  const insertMarkdown = (prefix, suffix = '') => {`	**Declare Local Identifier: insertMarkdown** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
51	`    const textarea = textareaRef.current;`	**Declare Local Identifier: textarea** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
52	`    if (!textarea) return;`	**Execute: if (!textarea) return;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
53		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
54	`    const start = textarea.selectionStart;`	**Declare Local Identifier: start** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
55	`    const end = textarea.selectionEnd;`	**Declare Local Identifier: end** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
56	`    const text = textarea.value;`	**Declare Local Identifier: text** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
57	`    const selected = text.substring(start, end);`	**Declare Local Identifier: selected** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
58		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
59	`    let replacement = '';`	**Declare Local Identifier: replacement** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
60	` if (prefix === '```\n') {`	**Execute: if (prefix === '```\n') {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
61	`        replacement = `\`\`\`\n${selected || '// code here'}\n\`\`\``;`	**Execute: replacement = `\`\`\`\n${selected || '// code...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
62	`} else if (prefix === '[') {`	**Execute: } else if (prefix === '[') {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
63	`replacement = `[${selected || 'link text'}](https://)`;`	**Execute: replacement = `[${selected || 'link text'}](h...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
64	`} else {`	**Execute: } else {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
65	`replacement = `${prefix}${selected || 'text'}${suffix}`;`	**Execute: replacement = `${prefix}${selected || 'text'}...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
66	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
67		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
68	`const nextContent =`	**Declare Local Identifier: nextContent** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
69	`text.substring(0, start) + replacement + text.substring(end);`	**Execute: text.substring(0, start) + replacement + text...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
70	`setContent(nextContent);`	**Execute: setContent(nextContent);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
71		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
72	`setTimeout(() => {`	**Execute: setTimeout(() => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
73	`textarea.focus();`	**Execute: textarea.focus();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
74	`textarea.setSelectionRange(`	**Execute: textarea.setSelectionRange(** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
75	`start + prefix.length,`	**Execute: start + prefix.length,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
76	`start + prefix.length + (selected.length || (prefix === '```\n' ? 12 : 4)),`	**Execute: start + prefix.length + (selected.length || (...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
77	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
78	`}, 0);`	**Execute: }, 0);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
79	`  };`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
80		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
81	`  // Run AI Draft Coach`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
82	`  const handleGetCoachFeedback = asyn c () ⇒ {`	**Declare Local Identifier: handleGetCoachFeedback** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
83	`    setCoachError(null);`	**Execute: setCoachError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
84	`    if (title.trim().length < 5 || co ntent.trim().length < 10) {`	**Execute: if (title.trim().length < 5 || content.trim()...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
85	`setTouched({ title: true, content: true });`	**Execute: setTouched({ title: true, content: true });** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
86	`setCoachError(`	**Execute: setCoachError(** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
87	`'Please enter a title (min 5 chars) and draft description (min 10 chars) so the AI Coach can review it.',`	**Execute: 'Please enter a title (min 5 chars) and draft...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
88	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
89	`return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
90	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 273	`onClick={() => insertMarkdown('[', '](url)')}`	**Execute: onClick={() => insertMarkdown('[', '](url)')}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
274	`title='Insert link'`	**Execute: title='Insert link'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
275	`>`	**Execute: >** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
276	`<LinkIcon size={15} />`	**Execute: <LinkIcon size={15} />** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
277	`</button>`	**Execute: </button>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
278	`</div>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
279		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
280	`<span className={styles.charCount}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
281	`{content.length} characters`	**Execute: {content.length} characters** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
282	`</span>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
283	`</div>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
284		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
285	`<textarea`	**Execute: <textarea** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
286	`id='question-content'`	**Execute: id='question-content'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
287	`ref={textareaRef}`	**Execute: ref={textareaRef}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
288	`value={content}`	**Execute: value={content}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
289	`onChange={e => setCon tent(e.target.value)}`	**Execute: onChange={e => setContent(e.target.value)}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
290	`onBlur={() => setTouc hed(prev => ({ ...prev, content: true }))}`	**Execute: onBlur={() => setTouched(prev => ({ ...prev, ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

254		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
255	`.coachBtn:disabled {`	**CSS Property: .coachBtn = disabled {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
256	`  opacity: 0.6;`	**CSS Property: opacity = 0.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
257	`  cursor: not-allowed;`	**CSS Property: cursor = not-allowed** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
258	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
259		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
260	`.coachCaption {`	**Execute: .coachCaption {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
261	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
262	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
263	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
264		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
265	`.spinner {`	**Execute: .spinner {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
266	`  animation: spin 1s linear infinite;`	**CSS Property: animation = spin 1s linear infinite** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
267	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
268		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
269	`@keyframes spin {`	**Execute: @keyframes spin {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
270	`  from {`	**Execute: from {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
271	`    transform: rotate(0deg);`	**CSS Property: transform = rotate(0deg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
272	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
273	`  to {`	**Execute: to {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
274	`    transform: rotate(360deg);`	**CSS Property: transform = rotate(360deg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
275	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
276	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
277		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
278	`/* AI Coach Feedback Box */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
279	`.coachFeedbackBox {`	**Execute: .coachFeedbackBox {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
280	`  background-color: #f0fdf4;`	**CSS Property: background-color = #f0fdf4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
281	`  border: 1px solid #bbf7d0;`	**CSS Property: border = 1px solid #bbf7d0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
282	`  border-radius: var(--radius-lg, 0.75rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
283	`  padding: 1.25rem 1.5rem;`	**CSS Property: padding = 1.25rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
284	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
285	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
286	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
287	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
288		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
289	`.coachFeedbackHeader {`	**Execute: .coachFeedbackHeader {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
290	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
291	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
292	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
293	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
294		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
295	`.coachFeedbackTitleWrap {`	**Execute: .coachFeedbackTitleWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
296	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
297	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
298	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
299	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
300		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
301	`.coachSparkle {`	**Execute: .coachSparkle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
302	`  color: #16a34a;`	**CSS Property: color = #16a34a** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
303	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 355	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
356		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
357	`/* Action Buttons */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
358	`.actionRow {`	**Execute: .actionRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
359	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
360	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
361	`  justify-content: flex-end;`	**CSS Property: justify-content = flex-end** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
362	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
363	`  margin-top: 1rem;`	**CSS Property: margin-top = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
364	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
365		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
366	`.cancelBtn {`	**Execute: .cancelBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
367	`  padding: 0.625rem 1.25rem;`	**CSS Property: padding = 0.625rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
368	`  background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
369	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
370	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
371	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
372	`  font-weight: 500;`	**CSS Property: font-weight = 500** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
373	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
374	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
375	`  transition: color 0.15s ease;`	**CSS Property: transition = color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
376	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
377		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
378	`.cancelBtn:hover:not(:disabled) {`	**CSS Property: .cancelBtn = hover:not(:disabled) {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
379	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
380	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
381		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
382	`.submitBtn {`	**Execute: .submitBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
383	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
384	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
385	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
386	`  padding: 0.625rem 1.5rem;`	**CSS Property: padding = 0.625rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
387	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
388	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
389	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
390	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
391	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
392	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
393	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
394	`  transition: background-color 0.15s ease;`	**CSS Property: transition = background-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
395	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
396		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
397	`.submitBtn:hover:not(:disabled) {`	**CSS Property: .submitBtn = hover:not(:disabled) {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
398	`  background-color: var(--primary-hover, #ea580c);`	**CSS Property: background-color = var(--primary-hover, #ea580c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
399	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
400		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
401	`.submitBtn:disabled {`	**CSS Property: .submitBtn = disabled {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
402	`  opacity: 0.6;`	**CSS Property: opacity = 0.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
403	`  cursor: not-allowed;`	**CSS Property: cursor = not-allowed** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
404	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
405		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
406	`.errorAlert {`	**Execute: .errorAlert {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
407	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
408	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
409	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
410	`  padding: 0.875rem 1rem;`	**CSS Property: padding = 0.875rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
411	`  background-color: var(--error-light, #fee2e2);`	**CSS Property: background-color = var(--error-light, #fee2e2)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
412	`  border: 1px solid rgba(239, 68, 68, 0.3);`	**CSS Property: border = 1px solid rgba(239, 68, 68, 0.3)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
413	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
414	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
415	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
416	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`import { useState, useEffect, useRef, useCallback } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
2	`import { useParams, useNavigate, Link } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
3	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
4	`  ArrowLeft,`	**Execute: ArrowLeft,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
5	`  Share2,`	**Execute: Share2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`MessageSquare,`	**Execute: MessageSquare,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
7	`Sparkles,`	**Execute: Sparkles,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
8	`Send,`	**Execute: Send,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
9	`Bold,`	**Execute: Bold,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`Italic,`	**Execute: Italic,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
11	`Code,`	**Execute: Code,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
12	`  Link as LinkIcon,`	**Execute: Link as LinkIcon,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`  Check,`	**Execute: Check,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`  AlertCircle,`	**Execute: AlertCircle,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
15	`  Loader2,`	**Execute: Loader2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
16	`} from 'lucide-react';`	**Execute: } from 'lucide-react';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
17	`import ReactMarkdown from 'react-markdown';`	**Import Dependency: react-markdown** **WHY:** Brings react-markdown into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
18	`import { useAuth } from '../../contexts/AuthContext';`	**Import Dependency: ../../contexts/AuthContext** **WHY:** Brings ../../contexts/AuthContext into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
19	`import { questionService } from '../../services/question/question.service';`	**Import Dependency: ../../services/question/question.service** **WHY:** Brings ../../services/question/question.service into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
20	`import { answerService } from '../../services/answer/answer.service';`	**Import Dependency: ../../services/answer/answer.service** **WHY:** Brings ../../services/answer/answer.service into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
21	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
22	`  timeAgo,`	**Execute: timeAgo,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
23	`formatDate,`	**Execute: formatDate,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
24	`getInitials,`	**Execute: getInitials,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
25	`getAvatarColor,`	**Execute: getAvatarColor,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
26	`isAuthoredByUser,`	**Execute: isAuthoredByUser,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
27	`} from '../../lib/utils';`	**Execute: } from '../../lib/utils';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
28	`import RagAnswerBody from '../../components/RagAnswerBody/RagAnswerBody';`	**Import Dependency: ../../components/RagAnswerBody/RagAnswerBody** **WHY:** Brings ../../components/RagAnswerBody/RagAnswerBody into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
29	`import styles from './QuestionDetail.module.css';`	**Import Dependency: ./QuestionDetail.module.css** **WHY:** Brings ./QuestionDetail.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
30		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
31	`export default function QuestionDetail() {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
32	`  const { questionHash, id } = useParams();`	**Declare Local Identifier: { questionHash, id }** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
33	`  const activeHash = questionHash || id;`	**Declare Local Identifier: activeHash** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
34	`  const navigate = useNavigate();`	**Declare Local Identifier: navigate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
35	`  const { user } = useAuth();`	**Declare Local Identifier: { user }** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
36	`  const textareaRef = useRef(null);`	**Declare Mutable React Reference (useRef)** **WHY:** Holds a direct reference to a DOM element (e.g. textarea, file input) or a persistent mutable value without triggering re-renders on change. **WHEN:** Created on component initialization. **HOW:** Returns a stable object { current: initialValue } that persists across all re-renders of the component.
37		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
38	`  const [question, setQuestion] = useState(null);`	**Declare React State: question** **WHY:** Allows the component to remember dynamic data (question) and automatically re-render the user interface whenever setQuestion() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
39	`  const [answers, setAnswers] = useState([]);`	**Declare React State: answers** **WHY:** Allows the component to remember dynamic data (answers) and automatically re-render the user interface whenever setAnswers() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
40	`  const [relatedQuestions, setRelatedQuestions] = useState([]);`	**Declare React State: relatedQuestions** **WHY:** Allows the component to remember dynamic data (relatedQuestions) and automatically re-render the user interface whenever setRelatedQuestions() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
41	`  const [loading, setLoading] = useState(true);`	**Declare React State: loading** **WHY:** Allows the component to remember dynamic data (loading) and automatically re-render the user interface whenever setLoading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
42	`  const [error, setError] = useState(null);`	**Declare React State: error** **WHY:** Allows the component to remember dynamic data (error) and automatically re-render the user interface whenever setError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
43		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
44	`  // New Answer Form state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
45	`  const [answerContent, setAnswerCont ent] = useState('');`	**Declare React State: answerContent** **WHY:** Allows the component to remember dynamic data (answerContent) and automatically re-render the user interface whenever setAnswerContent() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
46	`  const [submittingAnswer, setSubmitt ingAnswer] = useState(false);`	**Declare React State: submittingAnswer** **WHY:** Allows the component to remember dynamic data (submittingAnswer) and automatically re-render the user interface whenever setSubmittingAnswer() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
47	`  const [submitError, setSubmitError] = useState(null);`	**Declare React State: submitError** **WHY:** Allows the component to remember dynamic data (submitError) and automatically re-render the user interface whenever setSubmitError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
48	`  const [copiedShare, setCopiedShare] = useState(false);`	**Declare React State: copiedShare** **WHY:** Allows the component to remember dynamic data (copiedShare) and automatically re-render the user interface whenever setCopiedShare() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
49		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
50	`  // AI Answer Fit state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
51	`  const [fitChecking, setFitChecking] = useState(false);`	**Declare React State: fitChecking** **WHY:** Allows the component to remember dynamic data (fitChecking) and automatically re-render the user interface whenever setFitChecking() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
52	`  const [fitResult, setFitResult] = useState(null);`	**Declare React State: fitResult** **WHY:** Allows the component to remember dynamic data (fitResult) and automatically re-render the user interface whenever setFitResult() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
53	`  const [fitError, setFitError] = useState(null);`	**Declare React State: fitError** **WHY:** Allows the component to remember dynamic data (fitError) and automatically re-render the user interface whenever setFitError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
54		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
55	`  const fetchQuestionDetails = useCallback(async () => {`	**Declare Local Identifier: fetchQuestionDetails** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
56	`    if (!activeHash) return;`	**Execute: if (!activeHash) return;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
57	`    setLoading(true);`	**Execute: setLoading(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
58	`    setError(null);`	**Execute: setError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
59	`    try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
60	`const data = await questionService.getSingleQuestion(activeHash);`	**Declare Local Identifier: data** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
61	`setQuestion(data.question);`	**Execute: setQuestion(data.question);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
62	`setAnswers(data.answers || []);`	**Execute: setAnswers(data.answers || []);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
63		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
64	`// Fetch related questions in parallel`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
65	`if (data.question) {`	**Execute: if (data.question) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
66	`questionService`	**Execute: questionService** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
67	`.findSimilarQuestions(activeHash, data.question.title)`	**Execute: .findSimilarQuestions(activeHash, data.questi...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
68	`.then(related => {`	**Execute: .then(related => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
69	`const filtered = related.filter(`	**Declare Local Identifier: filtered** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
70	`r => (r.questionHash || r.id) !== activeHash,`	**Execute: r => (r.questionHash || r.id) !== activeHash,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
71	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
72	`setRelatedQuestions(filtered.slice(0, 5));`	**Execute: setRelatedQuestions(filtered.slice(0, 5));** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
73	`})`	**Execute: })** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
74	`.catch(() => setRelatedQuestions([]));`	**Execute: .catch(() => setRelatedQuestions([]));** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
75	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
76	`} catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
77	`console.error('Failed to load question detail:', err);`	**Execute: console.error('Failed to load question detail...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
78	`setError(err.message || 'Unable to load question details.');`	**Execute: setError(err.message || 'Unable to load quest...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
79	`} finally {`	**Execute: } finally {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
80	`setLoading(false);`	**Execute: setLoading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
81	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
82	`}, [activeHash]);`	**Execute: }, [activeHash]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
83		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
84	`useEffect(() ⇒ {`	**Declare React Side-Effect (useEffect)** **WHY:** Executes asynchronous side-effects (data fetching, subscriptions, timer management, DOM mutations) outside the main render calculation. **WHEN:** Runs after the component renders and commits to the screen, depending on its dependency array. **HOW:** React schedules the effect callback to run in the microtask queue after paint, preventing render blocking.
85	`fetchQuestionDetails();`	**Execute: fetchQuestionDetails();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
86	`setAnswerContent('');`	**Execute: setAnswerContent('');** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
87	`setFitResult(null);`	**Execute: setFitResult(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
88	`setFitError(null);`	**Execute: setFitError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
89	`setSubmitError(null);`	**Execute: setSubmitError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

125	`setAnswerContent(nextContent);`	**Execute: setAnswerContent(nextContent);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
126		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
127	`setTimeout(() => {`	**Execute: setTimeout(() => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
128	`textarea.focus();`	**Execute: textarea.focus();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
129	`textarea.setSelectionRange(`	**Execute: textarea.setSelectionRange(** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
130	`start + prefix.length,`	**Execute: start + prefix.length,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
131	`start + prefix.length + (selected.length || (prefix === '```\n' ? 12 : 4)),`	**Execute: start + prefix.length + (selected.length || (...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
132	`      );`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
133	`    }, 0);`	**Execute: }, 0);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
134	`  };`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
135		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
136	`  // Check Answer Fit with AI`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
137	`  const handleCheckFit = async () => {`	**Declare Local Identifier: handleCheckFit** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
138	`    setFitError(null);`	**Execute: setFitError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
139	`    if (answerContent.trim().length < 20) {`	**Execute: if (answerContent.trim().length < 20) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
140	`      setFitError('You need at least 20 characters before evaluating answer fit.');`	**Execute: setFitError('You need at least 20 characters ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
141	`      return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
142	`    }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
143		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
144	`setFitChecking(true);`	**Execute: setFitChecking(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
145	`try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
146	`const result = await questionService.assessAnswerFit(`	**Declare Local Identifier: result** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
147	`activeHash,`	**Execute: activeHash,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
148	`answerContent.trim(),`	**Execute: answerContent.trim(),** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
149	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 31	`.layoutColumns {`	**Execute: .layoutColumns {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
32	`  display: grid;`	**CSS Property: display = grid** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
33	`  grid-template-columns: 1fr 20rem;`	**CSS Property: grid-template-columns = 1fr 20rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
34	`  gap: 1.75rem;`	**CSS Property: gap = 1.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
35	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
36	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
37		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
38	`@media (max-width: 960px) {`	**Execute: @media (max-width: 960px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
39	`  .layoutColumns {`	**Execute: .layoutColumns {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
40	`    grid-template-columns: 1fr;`	**CSS Property: grid-template-columns = 1fr** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
41	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
42	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
43		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
44	`.mainColumn {`	**Execute: .mainColumn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
45	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
46	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
47	`  gap: 2rem;`	**CSS Property: gap = 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
48	`  min-width: 0;`	**CSS Property: min-width = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
49	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
50		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
51	`/* Question Card */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
52	`.questionCard {`	**Execute: .questionCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
53	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
54	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
55	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
56	`  padding: 2rem;`	**CSS Property: padding = 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
57	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
58	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
59	`  gap: 1.25rem;`	**CSS Property: gap = 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
60	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
61		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
62	`.authorRow {`	**Execute: .authorRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
63	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
64	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
65	`  gap: 0.875rem;`	**CSS Property: gap = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
66	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
67		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
68	`.avatar {`	**Execute: .avatar {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
69	`  width: 2.75rem;`	**CSS Property: width = 2.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
70	`  height: 2.75rem;`	**CSS Property: height = 2.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
71	`  border-radius: var(--radius-full, 9999px);`	**CSS Property: border-radius = var(--radius-full, 9999px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
72	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
73	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
74	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
75	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
76	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
77	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
78	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
127	`  padding-top: 1.25rem;`	**CSS Property: padding-top = 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
128	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
129	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
130		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
131	`.shareBtn {`	**Execute: .shareBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
132	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
133	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
134	`  gap: 0.4rem;`	**CSS Property: gap = 0.4rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
135	`  padding: 0.4rem 0.875rem;`	**CSS Property: padding = 0.4rem 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
136	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
137	`  border: 1px solid var(--border, #cbd5e1);`	**CSS Property: border = 1px solid var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
138	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
139	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
140	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
141	`  font-weight: 500;`	**CSS Property: font-weight = 500** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
142	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
143	`  transition: all 0.15s ease;`	**CSS Property: transition = all 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
144	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
145		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
146	`.shareBtn:hover {`	**CSS Property: .shareBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
147	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
148	`  border-color: var(--primary, #f97316);`	**CSS Property: border-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
149	`  color: var(--primary, #f97316);`	**CSS Property: color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
150	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
151		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
152	`.shareSuccessIcon {`	**Execute: .shareSuccessIcon {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
153	`  color: var(--success, #10b981);`	**CSS Property: color = var(--success, #10b981)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
154	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
223		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
224	`.emptyIconWrap {`	**Execute: .emptyIconWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
225	`  width: 3.5rem;`	**CSS Property: width = 3.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
226	`  height: 3.5rem;`	**CSS Property: height = 3.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
227	`  border-radius: var(--radius-full, 9999px);`	**CSS Property: border-radius = var(--radius-full, 9999px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
228	`  background-color: #ffffff;`	**CSS Property: background-color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
229	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
230	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
231	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
232	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
233	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
234	`  margin-bottom: 0.5rem;`	**CSS Property: margin-bottom = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
235	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
236		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
237	`.emptyAnswersTitle {`	**Execute: .emptyAnswersTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
238	`  font-size: 1.0625rem;`	**CSS Property: font-size = 1.0625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
239	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
240	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
241		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
242	`.emptyAnswersText {`	**Execute: .emptyAnswersText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
243	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
244	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
245	`  max-width: 24rem;`	**CSS Property: max-width = 24rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
246	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
247	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
248	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
249		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
250	`/* Owner Notice Box */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
251	`.ownerNoticeBox {`	**Execute: .ownerNoticeBox {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
252	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
253	`  border: 1px solid var(--border, #cbd5e1);`	**CSS Property: border = 1px solid var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
254	`  border-radius: var(--radius-lg, 0.75rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
255	`  padding: 1.25rem 1.5rem;`	**CSS Property: padding = 1.25rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
256	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
257	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
258	`  gap: 0.875rem;`	**CSS Property: gap = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
259	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
260	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
316	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
317	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
318	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
319	`  padding: 0.5rem 0.75rem;`	**CSS Property: padding = 0.5rem 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
320	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
321	`  border-bottom: 1px solid var(--border, #e2e8f0);`	**CSS Property: border-bottom = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
322	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
323		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
324	`.toolbarButtons {`	**Execute: .toolbarButtons {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
325	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
326	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
327	`  gap: 0.25rem;`	**CSS Property: gap = 0.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
328	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
329		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
330	`.toolBtn {`	**Execute: .toolBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
331	`  background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
332	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
333	`  padding: 0.35rem 0.5rem;`	**CSS Property: padding = 0.35rem 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
334	`  border-radius: var(--radius-sm, 0.25rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
335	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
336	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
337	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
338	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
339	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
340	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
341		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
342	`.toolBtn:hover {`	**CSS Property: .toolBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
343	`  background-color: var(--surface-container-high, #e2e8f0);`	**CSS Property: background-color = var(--surface-container-high, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
344	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

Any local variables declared in this block that have no remaining references become eligible for garbage collection.
351		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
352	`.answerTextarea {`	**Execute: .answerTextarea {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
353	`  width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
354	`  padding: 0.875rem 1rem;`	**CSS Property: padding = 0.875rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
355	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
356	`color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
357	`background-color: transparent;`	**CSS Property: background-color = transparent** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
358	`border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
359	`outline: none;`	**CSS Property: outline = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
360	`resize: vertical;`	**CSS Property: resize = vertical** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
361	`min-height: 8rem;`	**CSS Property: min-height = 8rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
362	`  font-family: inherit;`	**CSS Property: font-family = inherit** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
363	`  line-height: 1.6;`	**CSS Property: line-height = 1.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
364	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
365		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
366	`.aiFitRow {`	**Execute: .aiFitRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
367	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
368	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
369	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
370	`  flex-wrap: wrap;`	**CSS Property: flex-wrap = wrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
371	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
372		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
373	`.checkFitBtn {`	**Execute: .checkFitBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
374	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
375	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
376	`  gap: 0.4rem;`	**CSS Property: gap = 0.4rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
377	`  padding: 0.45rem 0.875rem;`	**CSS Property: padding = 0.45rem 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
378	`  background-color: var(--surface-container-low, #f1f5f9);`	**CSS Property: background-color = var(--surface-container-low, #f1f5f9)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
379	`  border: 1px solid var(--border, #cbd5e1);`	**CSS Property: border = 1px solid var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
380	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
381	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
382	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
383	`  color: var(--text-secondary, #334155);`	**CSS Property: color = var(--text-secondary, #334155)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
384	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
385	`  transition: all 0.15s ease;`	**CSS Property: transition = all 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
386	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
403		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
404	`.fitErrorText {`	**Execute: .fitErrorText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
405	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
406	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
407	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
408	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
409	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
410	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
411		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
412	`/* Fit Result Box */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
413	`.fitResultBox {`	**Execute: .fitResultBox {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
414	`  border-radius: var(--radius-lg, 0.75 rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
415	`  padding: 1rem 1.25rem;`	**CSS Property: padding = 1rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
416	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
417	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
418	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
419	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
420		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
421	`.fitResultBox--strong {`	**Execute: .fitResultBox--strong {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
422	`  background-color: #f0fdf4;`	**CSS Property: background-color = #f0fdf4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
423	`  border: 1px solid #bbf7d0;`	**CSS Property: border = 1px solid #bbf7d0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
424	`  color: #166534;`	**CSS Property: color = #166534** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
425	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
426		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
427	`.fitResultBox--partial {`	**Execute: .fitResultBox--partial {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
428	`  background-color: #fffbeb;`	**CSS Property: background-color = #fffbeb** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
429	`  border: 1px solid #fde68a;`	**CSS Property: border = 1px solid #fde68a** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
430	`  color: #92400e;`	**CSS Property: color = #92400e** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
431	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
432		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
433	`.fitResultBox--weak {`	**Execute: .fitResultBox--weak {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
434	`  background-color: #fff1f2;`	**CSS Property: background-color = #fff1f2** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
435	`  border: 1px solid #fecdd3;`	**CSS Property: border = 1px solid #fecdd3** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
436	`  color: #9f1239;`	**CSS Property: color = #9f1239** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
437	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
438		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
439	`.fitResultHeader {`	**Execute: .fitResultHeader {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
440	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
441	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
442	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
443	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
444	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
445	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
446		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
447	`.fitNote {`	**Execute: .fitNote {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
448	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
449	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
450	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
451	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
452		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
453	`.submitRow {`	**Execute: .submitRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
454	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
455	`  justify-content: flex-end;`	**CSS Property: justify-content = flex-end** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
456	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
457	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
458		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
459	`.submitAnswerBtn {`	**Execute: .submitAnswerBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
460	`  padding: 0.625rem 1.5rem;`	**CSS Property: padding = 0.625rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
461	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
462	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
463	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
464	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
465	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
466	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
467	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
468	`  transition: background-color 0.15s ease;`	**CSS Property: transition = background-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
469	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
470	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
471	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
472	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
473		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
474	`.submitAnswerBtn:hover:not(:disabled) {`	**CSS Property: .submitAnswerBtn = hover:not(:disabled) {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
475	`  background-color: var(--primary-hover, #ea580c);`	**CSS Property: background-color = var(--primary-hover, #ea580c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
476	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
477		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
478	`.submitAnswerBtn:disabled {`	**CSS Property: .submitAnswerBtn = disabled {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
479	`  opacity: 0.5;`	**CSS Property: opacity = 0.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
480	`  cursor: not-allowed;`	**CSS Property: cursor = not-allowed** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
481	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
482		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
483	`/* Right Column (Sidebar) */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
484	`.sideColumn {`	**Execute: .sideColumn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
485	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
486	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
487	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

506		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
507	`.relatedList {`	**Execute: .relatedList {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
508	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
509	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
510	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
511	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
512		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
513	`.relatedCard {`	**Execute: .relatedCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
514	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
515	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
516	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
517	`  padding: 0.875rem 1rem;`	**CSS Property: padding = 0.875rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
518	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
519	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
520	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
521	`  transition: border-color 0.15s ease;`	**CSS Property: transition = border-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
522	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
523		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
524	`.relatedCard:hover {`	**CSS Property: .relatedCard = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
525	`  border-color: var(--primary, #f9731 6);`	**CSS Property: border-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
526	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
527		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
528	`.relatedCardTitle {`	**Execute: .relatedCardTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
529	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
530	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
531	`  color: var(--primary-dark, #c2410c);`	**CSS Property: color = var(--primary-dark, #c2410c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
532	`  text-decoration: none;`	**CSS Property: text-decoration = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
533	`  line-height: 1.4;`	**CSS Property: line-height = 1.4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
534	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 599	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
600	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
601	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
602	`  padding: 3rem 2rem;`	**CSS Property: padding = 3rem 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
603	`  text-align: center;`	**CSS Property: text-align = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
604	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
605	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
606	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
607	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
608	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
609		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
610	`.errorIcon {`	**Execute: .errorIcon {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
611	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
612	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
613		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
614	`.errorTitle {`	**Execute: .errorTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
615	`  font-size: 1.25rem;`	**CSS Property: font-size = 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
616	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
617	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
618	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
619	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
620		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
621	`.errorMessage {`	**Execute: .errorMessage {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
622	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
623	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
624	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
625	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
626		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
627	`.primaryBtn {`	**Execute: .primaryBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
628	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
629	`  padding: 0.5rem 1.25rem;`	**CSS Property: padding = 0.5rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
630	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
631	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
632	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
633	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
634	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
635	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
636	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
637	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
638		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
639	`.spinner {`	**Execute: .spinner {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
640	`  animation: spin 1s linear infinite;`	**CSS Property: animation = spin 1s linear infinite** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
641	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
642		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
643	`@keyframes spin {`	**Execute: @keyframes spin {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
644	`  from {`	**Execute: from {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
645	`    transform: rotate(0deg);`	**CSS Property: transform = rotate(0deg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
646	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
647	`  to {`	**Execute: to {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
648	`    transform: rotate(360deg);`	**CSS Property: transform = rotate(360deg)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
649	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
650	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
651		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
652	`@keyframes pulse {`	**Execute: @keyframes pulse {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
653	`  0% {`	**Execute: 0% {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
654	`    opacity: 0.6;`	**CSS Property: opacity = 0.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
655	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
656	`  50% {`	**Execute: 50% {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
657	`opacity: 1;`	**CSS Property: opacity = 1** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
658	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
659	`100% {`	**Execute: 100% {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
660	`opacity: 0.6;`	**CSS Property: opacity = 0.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
661	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
662	}	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
663		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`import { useState, useEffect, useCallback } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
2	`import { useNavigate } from 'react-router-dom';`	**Import Dependency: react-router-dom** **WHY:** Brings react-router-dom into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
3	`import { Plus, MessageSquare, AlertCircle, RefreshCw, ArrowRight } from 'lucide-react';`	**Import Dependency: lucide-react** **WHY:** Brings lucide-react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
4	`import { useAuth } from '../../contexts/AuthContext';`	**Import Dependency: ../../contexts/AuthContext** **WHY:** Brings ../../contexts/AuthContext into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
5	`import { questionService } from '../../services/question/question.service';`	**Import Dependency: ../../services/question/question.service** **WHY:** Brings ../../services/question/question.service into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
6	`import QuestionCard from '../../components/QuestionCard/QuestionCard';`	**Import Dependency: ../../components/QuestionCard/QuestionCard** **WHY:** Brings ../../components/QuestionCard/QuestionCard into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
7	`import styles from './MyQuestions.module.css';`	**Import Dependency: ./MyQuestions.module.css** **WHY:** Brings ./MyQuestions.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
8		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
9	`export default function MyQuestions() {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
10	`  const { user } = useAuth();`	**Declare Local Identifier: { user }** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
11	`  const navigate = useNavigate();`	**Declare Local Identifier: navigate** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
12		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
13	`  const [questions, setQuestions] = useState([]);`	**Declare React State: questions** **WHY:** Allows the component to remember dynamic data (questions) and automatically re-render the user interface whenever setQuestions() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
14	`  const [loading, setLoading] = useState(true);`	**Declare React State: loading** **WHY:** Allows the component to remember dynamic data (loading) and automatically re-render the user interface whenever setLoading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
15	`  const [error, setError] = useState (null);`	**Declare React State: error** **WHY:** Allows the component to remember dynamic data (error) and automatically re-render the user interface whenever setError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
16		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
17	`  const fetchMyQuestions = useCallbac k(async () ⇒ {`	**Declare Local Identifier: fetchMyQuestions** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
18	`    setLoading(true);`	**Execute: setLoading(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
19	`    setError(null);`	**Execute: setError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
20	`    try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
21	`const res = await questionService.getQuestions({ mine: true });`	**Declare Local Identifier: res** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
22	`setQuestions(res.questions);`	**Execute: setQuestions(res.questions);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
23	`} catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
24	`console.error('Failed to fetch my questions:', err);`	**Execute: console.error('Failed to fetch my questions:'...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
25	`setError(err.message || 'Unable to load your topics.');`	**Execute: setError(err.message || 'Unable to load your ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
26	`} finally {`	**Execute: } finally {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
27	`setLoading(false);`	**Execute: setLoading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
28	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
29	`}, []);`	**Execute: }, []);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
30		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
31	`useEffect(() => {`	**Declare React Side-Effect (useEffect)** **WHY:** Executes asynchronous side-effects (data fetching, subscriptions, timer management, DOM mutations) outside the main render calculation. **WHEN:** Runs after the component renders and commits to the screen, depending on its dependency array. **HOW:** React schedules the effect callback to run in the microtask queue after paint, preventing render blocking.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
32	`    fetchMyQuestions();`	**Execute: fetchMyQuestions();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
33	`  }, [fetchMyQuestions]);`	**Execute: }, [fetchMyQuestions]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
34		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
35	`  return (`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
36	`    <div className={styles.container}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
37	`      {/* Top Header Card */}`	**Execute: {/* Top Header Card */}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
38	`<section className={styles.headerCard} aria-labelledby='my-topics-heading'>`	**Execute: <section className={styles.headerCard} aria-l...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
39	`<div className={styles.headerContent}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
40	`<span className={styles.headerEyebrow}>YOUR WORKSPACE</span>`	**Execute: YOUR W...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
41	`<h1 id='my-topics-heading' className={styles.headerTitle}>`	**Execute: <h1 id='my-topics-heading' className={styles....** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
42	`Your topics`	**Execute: Your topics** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
43	`</h1>`	**Execute: </h1>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`.container {`	**Execute: .container {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
2	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
3	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
4	`  gap: var(--spacing-xl, 2rem);`	**CSS Property: gap = var(--spacing-xl, 2rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
5	`  width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
7		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
8	`.headerCard {`	**Execute: .headerCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
9	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
10	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
11	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
12	`  padding: 1.75rem 2rem;`	**CSS Property: padding = 1.75rem 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
13	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
14	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
15	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
16	`  gap: 1.5rem;`	**CSS Property: gap = 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17	`  flex-wrap: wrap;`	**CSS Property: flex-wrap = wrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
18	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
19		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
20	`.headerContent {`	**Execute: .headerContent {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
21	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
22	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
23	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
24	`  max-width: 42rem;`	**CSS Property: max-width = 42rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
25	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
26		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
27	`.headerEyebrow {`	**Execute: .headerEyebrow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
28	`  font-size: 0.6875rem;`	**CSS Property: font-size = 0.6875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
29	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
30	`  letter-spacing: 0.08em;`	**CSS Property: letter-spacing = 0.08em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
31	`  color: var(--primary-dark, #c2410c);`	**CSS Property: color = var(--primary-dark, #c2410c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
32	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
33		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
34	`.headerTitle {`	**Execute: .headerTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
35	`  font-size: 1.625rem;`	**CSS Property: font-size = 1.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
36	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
37	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
38	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
39	`  letter-spacing: -0.02em;`	**CSS Property: letter-spacing = -0.02em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
40	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
41		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
42	`.headerDesc {`	**Execute: .headerDesc {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
43	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
44	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
45	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
46	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
47	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
48		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
49	`.newQuestionBtn {`	**Execute: .newQuestionBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
50	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
51	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
52	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
53	`  padding: 0.625rem 1.25rem;`	**CSS Property: padding = 0.625rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
54	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
55	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
56	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
57	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
58	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
59	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
60	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
61	`  transition: background-color 0.15s ease;`	**CSS Property: transition = background-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
62	`  white-space: nowrap;`	**CSS Property: white-space = nowrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
63	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
64		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
65	`.newQuestionBtn:hover {`	**CSS Property: .newQuestionBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
66	`  background-color: var(--primary-hover, #ea580c);`	**CSS Property: background-color = var(--primary-hover, #ea580c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
67	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
68		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
69	`.questionList {`	**Execute: .questionList {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
70	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
71	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
72	`  gap: 0.875rem;`	**CSS Property: gap = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
73	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
74		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
75	`/* Loading Skeleton */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
76	`.loadingContainer {`	**Execute: .loadingContainer {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
77	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
78	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
79	`  gap: 0.875rem;`	**CSS Property: gap = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
80	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
81		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
82	`.skeletonCard {`	**Execute: .skeletonCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
83	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
84	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
85	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
86	`  padding: 1.25rem 1.5rem;`	**CSS Property: padding = 1.25rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
87	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
88	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
89	`  border-radius: var(--radius-lg, 0.75rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
90	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
91		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
92	`.skeletonAvatar {`	**Execute: .skeletonAvatar {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
93	`  width: 2.5rem;`	**CSS Property: width = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
94	`  height: 2.5rem;`	**CSS Property: height = 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
95	`  border-radius: var(--radius-full, 9999px);`	**CSS Property: border-radius = var(--radius-full, 9999px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
96	`  background-color: var(--surface-container-high, #e2e8f0);`	**CSS Property: background-color = var(--surface-container-high, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
97	`  animation: pulse 1.5s infinite ease-in-out;`	**CSS Property: animation = pulse 1.5s infinite ease-in-out** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
98	`  flex-shrink: 0;`	**CSS Property: flex-shrink = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
99	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
100		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
101	`.skeletonContent {`	**Execute: .skeletonContent {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
102	`  flex: 1;`	**CSS Property: flex = 1** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
103	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
104	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
105	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
106	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
107		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
108	`.skeletonTitle {`	**Execute: .skeletonTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
109	`  height: 1.25rem;`	**CSS Property: height = 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
110	`  width: 50%;`	**CSS Property: width = 50%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
111	`  background-color: var(--surface-container-high, #e2e8f0);`	**CSS Property: background-color = var(--surface-container-high, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
112	`  border-radius: var(--radius-sm, 0.25rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
113	`  animation: pulse 1.5s infinite ease-in-out;`	**CSS Property: animation = pulse 1.5s infinite ease-in-out** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
176		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
177	`/* Empty State */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
178	`.emptyCard {`	**Execute: .emptyCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
179	`  padding: 3.5rem 2rem;`	**CSS Property: padding = 3.5rem 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
180	`  text-align: center;`	**CSS Property: text-align = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
181	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
182	`  border: 1px dashed var(--border, #e2e8f0);`	**CSS Property: border = 1px dashed var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
183	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
184	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
185	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
186	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
187	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
188	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
189	`  max-width: 36rem;`	**CSS Property: max-width = 36rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
190	`  margin: 1.5rem auto;`	**CSS Property: margin = 1.5rem auto** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
191	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
192		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
193	`.emptyIconWrap {`	**Execute: .emptyIconWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
194	`  width: 3.5rem;`	**CSS Property: width = 3.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
195	`  height: 3.5rem;`	**CSS Property: height = 3.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
196	`  border-radius: var(--radius-full, 9999px);`	**CSS Property: border-radius = var(--radius-full, 9999px)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
197	`  background-color: var(--surface-container-low, #f1f5f9);`	**CSS Property: background-color = var(--surface-container-low, #f1f5f9)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
198	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
199	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
200	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
201	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
202	`  margin-bottom: 0.5rem;`	**CSS Property: margin-bottom = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
203	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
204		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
205	`.emptyTitle {`	**Execute: .emptyTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
206	`  font-size: 1.125rem;`	**CSS Property: font-size = 1.125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
207	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
208	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
209	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
210	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
211		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
212	`.emptyText {`	**Execute: .emptyText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
213	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
214	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
215	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
216	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
217	`  max-width: 28rem;`	**CSS Property: max-width = 28rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
218	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
219		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
220	`.emptyCtaBtn {`	**Execute: .emptyCtaBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
221	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
222	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
223	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
224	`  padding: 0.625rem 1.25rem;`	**CSS Property: padding = 0.625rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
225	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
226	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
227	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
228	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
229	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
230	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
231	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
232	`  transition: background-color 0.15s ease;`	**CSS Property: transition = background-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
233	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
234	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
235		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
236	`.emptyCtaBtn:hover {`	**CSS Property: .emptyCtaBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
237	`  background-color: var(--primary-hover, #ea580c);`	**CSS Property: background-color = var(--primary-hover, #ea580c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
238	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
239		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
240	`@keyframes pulse {`	**Execute: @keyframes pulse {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
241	`  0% {`	**Execute: 0% {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
242	`    opacity: 0.6;`	**CSS Property: opacity = 0.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
243	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
1	`import { useState, useEffect, useRef, useCallback } from 'react';`	**Import Dependency: react** **WHY:** Brings react into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
2	`import {`	**Import Dependency: module** **WHY:** Brings module into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
3	`  Upload,`	**Execute: Upload,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
4	`  FileText,`	**Execute: FileText,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
5	`  Trash2,`	**Execute: Trash2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
6	`Sparkles,`	**Execute: Sparkles,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
7	`Search,`	**Execute: Search,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
8	`AlertCircle,`	**Execute: AlertCircle,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
9	`CheckCircle2,`	**Execute: CheckCircle2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`Loader2,`	**Execute: Loader2,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
11	`File,`	**Execute: File,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
12	`  Layers,`	**Execute: Layers,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
13	`} from 'lucide-react';`	**Execute: } from 'lucide-react';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
14	`import { ragService } from '../../services/rag/rag.service';`	**Import Dependency: ../../services/rag/rag.service** **WHY:** Brings ../../services/rag/rag.service into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
15	`import RagAnswerBody from '../../components/RagAnswerBody/RagAnswerBody';`	**Import Dependency: ../../components/RagAnswerBody/RagAnswerBody** **WHY:** Brings ../../components/RagAnswerBody/RagAnswerBody into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.
16	`import styles from './RagDocuments.module.css';`	**Import Dependency: ./RagDocuments.module.css** **WHY:** Brings ./RagDocuments.module.css into the file scope so its exported functions, classes, or configuration can be used without reinventing the wheel. **WHEN:** Evaluated statically when Node.js / Vite loads and resolves the module dependency tree. **HOW:** The module loader resolves the file path or package from node_modules, executes it if not already cached, and binds exported identifiers to local constants.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
18	`export default function RagDocuments () {`	**Export Public Interface: function** **WHY:** Exposes function so other modules, routes, or components in the project can import and use it cleanly. **WHEN:** Registered when the module finishes evaluating. **HOW:** Binds the identifier to the module's public export record in the ES Module environment.
19	`  const fileInputRef = useRef(null);`	**Declare Mutable React Reference (useRef)** **WHY:** Holds a direct reference to a DOM element (e.g. textarea, file input) or a persistent mutable value without triggering re-renders on change. **WHEN:** Created on component initialization. **HOW:** Returns a stable object { current: initialValue } that persists across all re-renders of the component.
20		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
21	`  // Document list state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
22	`  const [documents, setDocuments] = useState([]);`	**Declare React State: documents** **WHY:** Allows the component to remember dynamic data (documents) and automatically re-render the user interface whenever setDocuments() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
23	`  const [loadingDocs, setLoadingDocs] = useState(true);`	**Declare React State: loadingDocs** **WHY:** Allows the component to remember dynamic data (loadingDocs) and automatically re-render the user interface whenever setLoadingDocs() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
24	`  const [docsError, setDocsError] = useState(null);`	**Declare React State: docsError** **WHY:** Allows the component to remember dynamic data (docsError) and automatically re-render the user interface whenever setDocsError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
25		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
26	`  // Active document selection`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
27	`  const [activeDoc, setActiveDoc] = useState(null);`	**Declare React State: activeDoc** **WHY:** Allows the component to remember dynamic data (activeDoc) and automatically re-render the user interface whenever setActiveDoc() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
28	`  const [pdfUrl, setPdfUrl] = useState(null);`	**Declare React State: pdfUrl** **WHY:** Allows the component to remember dynamic data (pdfUrl) and automatically re-render the user interface whenever setPdfUrl() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
29	`  const [pdfLoading, setPdfLoading] = useState(false);`	**Declare React State: pdfLoading** **WHY:** Allows the component to remember dynamic data (pdfLoading) and automatically re-render the user interface whenever setPdfLoading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
30		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
31	`  // Upload state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
32	`  const [selectedFile, setSelectedFile] = useState(null);`	**Declare React State: selectedFile** **WHY:** Allows the component to remember dynamic data (selectedFile) and automatically re-render the user interface whenever setSelectedFile() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
33	`  const [uploading, setUploading] = useState(false);`	**Declare React State: uploading** **WHY:** Allows the component to remember dynamic data (uploading) and automatically re-render the user interface whenever setUploading() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
34	`  const [uploadError, setUploadError] = useState(null);`	**Declare React State: uploadError** **WHY:** Allows the component to remember dynamic data (uploadError) and automatically re-render the user interface whenever setUploadError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
35	`  const [uploadSuccess, setUploadSuccess] = useState(null);`	**Declare React State: uploadSuccess** **WHY:** Allows the component to remember dynamic data (uploadSuccess) and automatically re-render the user interface whenever setUploadSuccess() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
36		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
37	`  // Semantic search state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
38	`  const [searchQuery, setSearchQuery] = useState('');`	**Declare React State: searchQuery** **WHY:** Allows the component to remember dynamic data (searchQuery) and automatically re-render the user interface whenever setSearchQuery() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
39	`  const [searching, setSearching] = useState(false);`	**Declare React State: searching** **WHY:** Allows the component to remember dynamic data (searching) and automatically re-render the user interface whenever setSearching() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
40	`  const [searchResults, setSearchResults] = useState(null);`	**Declare React State: searchResults** **WHY:** Allows the component to remember dynamic data (searchResults) and automatically re-render the user interface whenever setSearchResults() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
41	`  const [searchError, setSearchError] = useState(null);`	**Declare React State: searchError** **WHY:** Allows the component to remember dynamic data (searchError) and automatically re-render the user interface whenever setSearchError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
42		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
43	`  // Ask AI state`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
44	`  const [aiQuestion, setAiQuestion] = useState('');`	**Declare React State: aiQuestion** **WHY:** Allows the component to remember dynamic data (aiQuestion) and automatically re-render the user interface whenever setAiQuestion() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
45	`  const [askingAi, setAskingAi] = useState(false);`	**Declare React State: askingAi** **WHY:** Allows the component to remember dynamic data (askingAi) and automatically re-render the user interface whenever setAskingAi() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
46	`  const [aiAnswer, setAiAnswer] = useState(null);`	**Declare React State: aiAnswer** **WHY:** Allows the component to remember dynamic data (aiAnswer) and automatically re-render the user interface whenever setAiAnswer() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
47	`  const [aiError, setAiError] = useState(null);`	**Declare React State: aiError** **WHY:** Allows the component to remember dynamic data (aiError) and automatically re-render the user interface whenever setAiError() is called. **WHEN:** Initializes on first component mount; preserved across subsequent re-renders. **HOW:** React stores the state value on the component's internal fiber node and returns a pair: [currentValue, dispatchFunction].
48		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
49	`  // Fetch documents list on mount`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
50	`  const fetchDocuments = useCallback(async () => {`	**Declare Local Identifier: fetchDocuments** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
51	`    setLoadingDocs(true);`	**Execute: setLoadingDocs(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
52	`    setDocsError(null);`	**Execute: setDocsError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
53	`    try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
54	`      const list = await ragService.listDocuments();`	**Declare Local Identifier: list** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
55	`      setDocuments(list);`	**Execute: setDocuments(list);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
56	`      // Auto-select first document if none active`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
57	`      if (list.length > 0 && !activeDoc) {`	**Execute: if (list.length > 0 && !activeDoc) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
58	`        setActiveDoc(list[0]);`	**Execute: setActiveDoc(list[0]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
59	`        }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
60	`    } catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
61	`        console.error('Failed to list RAG documents:', err);`	**Execute: console.error('Failed to list RAG documents:'...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
62	`        setDocsError(err.message || 'Unable to load documents from knowledge base.');`	**Execute: setDocsError(err.message || 'Unable to load d...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
63	`    } finally {`	**Execute: } finally {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
64	`        setLoadingDocs(false);`	**Execute: setLoadingDocs(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
65	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
66	`}, [activeDoc]);`	**Execute: }, [activeDoc]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
67		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
68	`useEffect(() => {`	**Declare React Side-Effect (useEffect)** **WHY:** Executes asynchronous side-effects (data fetching, subscriptions, timer management, DOM mutations) outside the main render calculation. **WHEN:** Runs after the component renders and commits to the screen, depending on its dependency array. **HOW:** React schedules the effect callback to run in the microtask queue after paint, preventing render blocking.
69	`  fetchDocuments();`	**Execute: fetchDocuments();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
70	`}, [fetchDocuments]);`	**Execute: }, [fetchDocuments]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
71		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
72	`  // Load PDF Object URL when active document changes`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
73	`  useEffect(() => {`	**Declare React Side-Effect (useEffect)** **WHY:** Executes asynchronous side-effects (data fetching, subscriptions, timer management, DOM mutations) outside the main render calculation. **WHEN:** Runs after the component renders and commits to the screen, depending on its dependency array. **HOW:** React schedules the effect callback to run in the microtask queue after paint, preventing render blocking.
74	`    let currentUrl = null;`	**Declare Local Identifier: currentUrl** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
75	`    if (activeDoc) {`	**Execute: if (activeDoc) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
76	`      setPdfLoading(true);`	**Execute: setPdfLoading(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
77	`setSearchResults(null);`	**Execute: setSearchResults(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
78	`setAiAnswer(null);`	**Execute: setAiAnswer(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
79	`setSearchError(null);`	**Execute: setSearchError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
80	`setAiError(null);`	**Execute: setAiError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
81		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
82	`ragService`	**Execute: ragService** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
83	`.fetchPdfObjectUrl(activeDoc.id || activeDoc.documentId)`	**Execute: .fetchPdfObjectUrl(activeDoc.id || activeDoc....** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
84	`.then(url => {`	**Execute: .then(url => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
85	`currentUrl = url;`	**Execute: currentUrl = url;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
86	`setPdfUrl(url);`	**Execute: setPdfUrl(url);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
87	`})`	**Execute: })** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
88	`.catch(err => {`	**Execute: .catch(err => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
89	`console.warn('Could not fetch PDF object URL:', err);`	**Execute: console.warn('Could not fetch PDF object URL:...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
90	`setPdfUrl(null);`	**Execute: setPdfUrl(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
91	`})`	**Execute: })** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
92	`.finally(() => {`	**Execute: .finally(() => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
93	`setPdfLoading(false);`	**Execute: setPdfLoading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
94	`});`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
95	`} else {`	**Execute: } else {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
96	`setPdfUrl(null);`	**Execute: setPdfUrl(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
97	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 98		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
99	`return () => {`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
100	`if (currentUrl) {`	**Execute: if (currentUrl) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
101	`URL.revokeObjectURL(currentUrl);`	**Execute: URL.revokeObjectURL(currentUrl);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
102	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
103	`};`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
104	`}, [activeDoc]);`	**Execute: }, [activeDoc]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
105		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
106	`  // File selection`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
107	`  const handleFileChange = e => {`	**Declare Local Identifier: handleFileChange** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
108	`    const file = e.target.files?.[0];`	**Declare Local Identifier: file** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
109	`    setUploadError(null);`	**Execute: setUploadError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
110	`    setUploadSuccess(null);`	**Execute: setUploadSuccess(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
111	`    if (!file) {`	**Execute: if (!file) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
112	`setSelectedFile(null);`	**Execute: setSelectedFile(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
113	`return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
114	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
115	`if (!file.name.toLowerCase().endsWith('.pdf')) {`	**Execute: if (!file.name.toLowerCase().endsWith('.pdf')...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
116	`setUploadError('Only PDF documents are supported.');`	**Execute: setUploadError('Only PDF documents are suppor...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
117	`setSelectedFile(null);`	**Execute: setSelectedFile(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
118	`return;`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
119	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 120	`setSelectedFile(file);`	**Execute: setSelectedFile(file);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
121	`};`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
122		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
123	`// Upload file`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
124	`  const handleUpload = async () => {`	**Declare Local Identifier: handleUpload** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
125	`    if (!selectedFile) return;`	**Execute: if (!selectedFile) return;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
126	`    setUploading(true);`	**Execute: setUploading(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
127	`    setUploadError(null);`	**Execute: setUploadError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
128	`    setUploadSuccess(null);`	**Execute: setUploadSuccess(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
129		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
130	`try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
131	`// Upload returns immediately with status: 'processing'`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
132	`const newDoc = await ragService.uploadPdf(selectedFile);`	**Declare Local Identifier: newDoc** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
133	`setUploadSuccess(`"${selectedFile.name}" uploaded! Processing in background…`);`	**Execute: setUploadSuccess(`"${selectedFile.name}" uplo...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
134	`setSelectedFile(null);`	**Execute: setSelectedFile(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
135	`if (fileInputRef.current) {`	**Execute: if (fileInputRef.current) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
136	`fileInputRef.current.value = '';`	**Execute: fileInputRef.current.value = '';** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
137	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
138	`// Add doc to list immediately so user sees it`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
139	`setDocuments(prev => [newDoc, ...prev]);`	**Execute: setDocuments(prev => [newDoc, ...prev]);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
140	`setActiveDoc(newDoc);`	**Execute: setActiveDoc(newDoc);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
141	`setUploading(false);`	**Execute: setUploading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
142		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
143	`// Poll every 3s until status changes to 'ready' or 'failed'`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
144	`ragService.pollDocumentStatus(newDoc.id, updatedDoc => {`	**Execute: ragService.pollDocumentStatus(newDoc.id, upda...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
145	`setDocuments(prev =>`	**Execute: setDocuments(prev =>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
146	`prev.map(d => (d.id === updatedDoc.id ? updatedDoc : d)),`	**Execute: prev.map(d => (d.id === updatedDoc.id ? updat...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
147	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
148	`if (updatedDoc.id === newDoc.id) {`	**Execute: if (updatedDoc.id === newDoc.id) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
149	`setActiveDoc(updatedDoc);`	**Execute: setActiveDoc(updatedDoc);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
150	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
151	`}).then(finalDoc => {`	**Execute: }).then(finalDoc => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
152	`setDocuments(prev =>`	**Execute: setDocuments(prev =>** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
153	`prev.map(d => (d.id === finalDoc.id ? finalDoc : d)),`	**Execute: prev.map(d => (d.id === finalDoc.id ? finalDo...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
154	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
155	`setActiveDoc(finalDoc);`	**Execute: setActiveDoc(finalDoc);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
156	`if (finalDoc.status === 'ready') {`	**Execute: if (finalDoc.status === 'ready') {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
157	`setUploadSuccess(`"${finalDoc.title}" is ready!`);`	**Execute: setUploadSuccess(`"${finalDoc.title}" is read...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
158	`} else {`	**Execute: } else {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
159	`setUploadError(`Processing failed: ${finalDoc.error_message || 'Unknown error'}`);`	**Execute: setUploadError(`Processing failed: ${finalDoc...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
160	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
161	`}).catch(err => {`	**Execute: }).catch(err => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
162	`setUploadError(err.message);`	**Execute: setUploadError(err.message);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
163	`});`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
164	`} catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
165	`console.error('Upload error:', err);`	**Execute: console.error('Upload error:', err);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
166	`setUploadError(err.message || 'Failed to upload document.');`	**Execute: setUploadError(err.message || 'Failed to uplo...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
167	`setUploading(false);`	**Execute: setUploading(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
168	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
210		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
211	`  // Ask AI about Document`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
212	`  const handleAskSubmit = async e => {`	**Declare Local Identifier: handleAskSubmit** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
213	`    e.preventDefault();`	**Execute: e.preventDefault();** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
214	`    if (!aiQuestion.trim() || !activeDoc) return;`	**Execute: if (!aiQuestion.trim() || !activeDoc) return;** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
215	`    setAskingAi(true);`	**Execute: setAskingAi(true);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
216	`setAiError(null);`	**Execute: setAiError(null);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
217		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
218	`try {`	**Execute: try {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
219	`const response = await ragService.queryDocument(`	**Declare Local Identifier: response** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
220	`activeDoc.id || activeDoc.documentId,`	**Execute: activeDoc.id || activeDoc.documentId,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
221	`aiQuestion.trim(),`	**Execute: aiQuestion.trim(),** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
222	`);`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
223	`setAiAnswer(response.answer);`	**Execute: setAiAnswer(response.answer);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
224	`} catch (err) {`	**Execute: } catch (err) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
225	`console.error('Ask AI error:', err);`	**Execute: console.error('Ask AI error:', err);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
226	`setAiError(err.message || 'Could not get an answer.');`	**Execute: setAiError(err.message || 'Could not get an a...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
227	`} finally {`	**Execute: } finally {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
228	`setAskingAi(false);`	**Execute: setAskingAi(false);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
229	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
230	`};`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
231		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
232	`return (`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
233	`<div className={styles.container}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
348	`<div className={styles.docList}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
349	`{documents.map(doc => {`	**Execute: {documents.map(doc ⇒ {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
350	`const docId = doc.id || doc.documentId;`	**Declare Local Identifier: docId** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
351	`const isSelected =`	**Declare Local Identifier: isSelected** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.
352	`(activeDoc?.id || activeDoc?.documentId) === docId;`	**Execute: (activeDoc?.id || activeDoc?.documentId) === ...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
353	`const status = (doc.status || 'ready').toUpperCase();`	**Declare Local Identifier: status** **WHY:** Stores an intermediate calculation, object reference, or configuration value in memory for subsequent operations. **WHEN:** Evaluated when execution reaches this line. **HOW:** Allocates memory in the current lexical scope and assigns the evaluated right-hand expression.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
354		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
355	`return (`	**Return from Function** **WHY:** Terminates execution of the current function and passes the computed result back to the caller. **WHEN:** Executes when function logic completes. **HOW:** Pops the current stack frame and places return value in the caller's execution context.
356	`<div`	**Execute: <div** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
357	`key={docId}`	**Execute: key={docId}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
358	`onClick={() => setActiveDoc(doc)}`	**Execute: onClick={() => setActiveDoc(doc)}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
359	`className={` `${styles.docItem} ${`	**Execute: className={`${styles.docItem} ${** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
360	`isSelected ? styles['docItem--active'] : ''`	**Execute: isSelected ? styles['docItem--active'] : ''** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
361	`}`}`	**Execute: }`}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
362	`role='button'`	**Execute: role='button'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
363	`tabIndex={0}`	**Execute: tabIndex={0}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
364	`onKeyDown={e => {`	**Execute: onKeyDown={e => {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
365	`if (e.key === 'Enter' || e.key === ' ') {`	**Execute: if (e.key === 'Enter' || e.key === ' ') {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
366	`setActiveDoc(doc);`	**Execute: setActiveDoc(doc);** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
367	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
368	`}}`	**Execute: }}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
369	`>`	**Execute: >** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
370	`<div className={styles.docItemInfo}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
371	`<span className={styles.docItemTitle}>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
372	`{doc.title || doc.filename || 'Untitled document'}`	**Execute: {doc.title || doc.filename || 'Untitled docum...** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
373	`</span>`	**Execute: ** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
374	`<span`	**Execute: <span** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
375	`className={`${styles.statusBadge} ${`	**Execute: className={`${styles.statusBadge} ${** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
376	`status === 'READY'`	**Execute: status === 'READY'** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
377	`? styles['statusBadge--ready']`	**Execute: ? styles['statusBadge--ready']** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
378	`: styles['statusBadge--processing']`	**Execute: : styles['statusBadge--processing']** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
379	`}`}`	**Execute: }`}** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

7		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
8	`/* Header Card */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
9	`.headerCard {`	**Execute: .headerCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
10	`  background-color: var(--surface, #ffffff);`	**CSS Property: background-color = var(--surface, #ffffff)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
11	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
12	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
13	`  padding: 1.75rem 2rem;`	**CSS Property: padding = 1.75rem 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
14	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
15	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
16	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
17	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
18		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
19	`.headerEyebrow {`	**Execute: .headerEyebrow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
20	`font-size: 0.6875rem;`	**CSS Property: font-size = 0.6875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
21	`font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
22	`letter-spacing: 0.08em;`	**CSS Property: letter-spacing = 0.08em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
23	`  color: var(--primary-dark, #c2410c);`	**CSS Property: color = var(--primary-dark, #c2410c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
24	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
25		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
26	`.headerTitle {`	**Execute: .headerTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
27	`  font-size: 1.625rem;`	**CSS Property: font-size = 1.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
28	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
29	`color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
30	`margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
31	`letter-spacing: -0.02em;`	**CSS Property: letter-spacing = -0.02em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
32	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
33		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
34	`.headerDesc {`	**Execute: .headerDesc {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
35	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
36	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
37	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
38	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
39	`  max-width: 50rem;`	**CSS Property: max-width = 50rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
40	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
41		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
42	`/* Two-column layout */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
43	`.layoutColumns {`	**Execute: .layoutColumns {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
44	`  display: grid;`	**CSS Property: display = grid** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
45	`  grid-template-columns: 22rem 1fr;`	**CSS Property: grid-template-columns = 22rem 1fr** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
46	`  gap: 1.75rem;`	**CSS Property: gap = 1.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
47	`  align-items: flex-start;`	**CSS Property: align-items = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
48	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
49		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
50	`@media (max-width: 1024px) {`	**Execute: @media (max-width: 1024px) {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
51	`  .layoutColumns {`	**Execute: .layoutColumns {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
52	`    grid-template-columns: 1fr;`	**CSS Property: grid-template-columns = 1fr** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
53	`  }`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 103	`  font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
104	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
105	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
106	`  line-height: 1.4;`	**CSS Property: line-height = 1.4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
107	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
108		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
109	`.hiddenFileInput {`	**Execute: .hiddenFileInput {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
110	`  display: none;`	**CSS Property: display = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
111	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
112		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
113	`.uploadActions {`	**Execute: .uploadActions {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
114	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
115	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
116	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
117	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
118		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
119	`.chooseFileBtn {`	**Execute: .chooseFileBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
120	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
121	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
122	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
123	`  padding: 0.45rem 0.875rem;`	**CSS Property: padding = 0.45rem 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
124	`  background-color: #ffffff;`	**CSS Property: background-color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
125	`  border: 1px solid var(--border, #cbd5e1);`	**CSS Property: border = 1px solid var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
126	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
127	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
128	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
129	`  font-weight: 500;`	**CSS Property: font-weight = 500** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
130	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
131	`  transition: all 0.15s ease;`	**CSS Property: transition = all 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
132	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
133		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
134	`.chooseFileBtn:hover:not(:disabled) {`	**CSS Property: .chooseFileBtn = hover:not(:disabled) {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
135	`  background-color: var(--surface-hover, #f1f5f9);`	**CSS Property: background-color = var(--surface-hover, #f1f5f9)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
136	`  border-color: var(--border-hover, #94a3b8);`	**CSS Property: border-color = var(--border-hover, #94a3b8)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
137	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
138		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
139	`.uploadBtn {`	**Execute: .uploadBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
140	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
141	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
142	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
143	`  padding: 0.45rem 0.875rem;`	**CSS Property: padding = 0.45rem 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
144	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
145	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
146	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
147	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
148	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
149	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
150	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
151	`  transition: background-color 0.15s ease;`	**CSS Property: transition = background-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
152	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 157		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
158	`.uploadBtn:disabled {`	**CSS Property: .uploadBtn = disabled {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
159	`  opacity: 0.5;`	**CSS Property: opacity = 0.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
160	`  cursor: not-allowed;`	**CSS Property: cursor = not-allowed** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
161	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
162		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
163	`.selectedFileText {`	**Execute: .selectedFileText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
164	`  font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
165	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
166	`  font-style: italic;`	**CSS Property: font-style = italic** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
167	`  overflow: hidden;`	**CSS Property: overflow = hidden** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
168	`  text-overflow: ellipsis;`	**CSS Property: text-overflow = ellipsis** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
169	`  white-space: nowrap;`	**CSS Property: white-space = nowrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
170	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
171		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
172	`.uploadErrorText {`	**Execute: .uploadErrorText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
173	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
174	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
175	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
176	`  font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
177	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
178	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
179		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
180	`.uploadSuccessText {`	**Execute: .uploadSuccessText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
181	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
182	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
183	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
184	`  font-size: 0.75rem;`	**CSS Property: font-size = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
185	`  color: var(--success, #10b981);`	**CSS Property: color = var(--success, #10b981)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
186	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
187		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
188	`/* Document List */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
189	`.docListSection {`	**Execute: .docListSection {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
190	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
191	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
192	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
193	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
194		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
195	`.docLoading {`	**Execute: .docLoading {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
196	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
197	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
198	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
199	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
200	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
201	`  padding: 1rem 0;`	**CSS Property: padding = 1rem 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
202	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
203	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
204		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
205	`.docListError {`	**Execute: .docListError {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
206	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
207	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
208	`  gap: 0.35rem;`	**CSS Property: gap = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
209	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
210	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
211	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
212		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
213	`.emptyDocList {`	**Execute: .emptyDocList {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
214	`display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
215	`flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
216	`align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
217	`gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
218	`padding: 2rem 1rem;`	**CSS Property: padding = 2rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
219	`text-align: center;`	**CSS Property: text-align = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
220	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

233		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
234	`.docItem {`	**Execute: .docItem {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
235	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
236	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
237	`  justify-content: space-between;`	**CSS Property: justify-content = space-between** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
238	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
239	`  padding: 0.75rem 1rem;`	**CSS Property: padding = 0.75rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
240	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
241	`  border: 1px solid var(--border, #e2e8f0);`	**CSS Property: border = 1px solid var(--border, #e2e8f0)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
242	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
243	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
244	`  transition: all 0.15s ease;`	**CSS Property: transition = all 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
245	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
246		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
247	`.docItem:hover {`	**CSS Property: .docItem = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
248	`  background-color: #ffffff;`	**CSS Property: background-color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
249	`  border-color: var(--border-hover, #cbd5e1);`	**CSS Property: border-color = var(--border-hover, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
250	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
251		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
252	`.docItem--active {`	**Execute: .docItem--active {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
253	`  border-color: var(--primary, #f9731 6);`	**CSS Property: border-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
254	`  background-color: #ffffff;`	**CSS Property: background-color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
255	`  box-shadow: 0 0 0 1px var(--primary, #f97316);`	**CSS Property: box-shadow = 0 0 0 1px var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
256	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
257		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
258	`.docItemInfo {`	**Execute: .docItemInfo {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
259	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
260	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
261	`  gap: 0.25rem;`	**CSS Property: gap = 0.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
262	`  min-width: 0;`	**CSS Property: min-width = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
263	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
264		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
265	`.docItemTitle {`	**Execute: .docItemTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
266	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
267	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
268	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
269	`  overflow: hidden;`	**CSS Property: overflow = hidden** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
270	`  text-overflow: ellipsis;`	**CSS Property: text-overflow = ellipsis** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
271	`  white-space: nowrap;`	**CSS Property: white-space = nowrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
272	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
273		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
274	`.statusBadge {`	**Execute: .statusBadge {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
275	`  font-size: 0.625rem;`	**CSS Property: font-size = 0.625rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
276	`  font-weight: 700;`	**CSS Property: font-weight = 700** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
277	`  padding: 0.1rem 0.4rem;`	**CSS Property: padding = 0.1rem 0.4rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
278	`  border-radius: var(--radius-sm, 0.25 rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
279	`  align-self: flex-start;`	**CSS Property: align-self = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
280	`  letter-spacing: 0.05em;`	**CSS Property: letter-spacing = 0.05em** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
281	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 292		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
293	`.deleteDocBtn {`	**Execute: .deleteDocBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
294	`  background: none;`	**CSS Property: background = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
295	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
296	`  color: var(--text-tertiary, #94a3b8);`	**CSS Property: color = var(--text-tertiary, #94a3b8)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
297	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
298	`  padding: 0.35rem;`	**CSS Property: padding = 0.35rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
299	`  border-radius: var(--radius-sm, 0.25 rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
300	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
301	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
302	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
303	`  transition: color 0.15s ease;`	**CSS Property: transition = color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
304	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
305		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
306	`.deleteDocBtn:hover {`	**CSS Property: .deleteDocBtn = hover {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
307	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
308	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
309		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
310	`/* Right Column */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
311	`.activeColumn {`	**Execute: .activeColumn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
312	`  min-width: 0;`	**CSS Property: min-width = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
313	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
314		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
315	`.noSelectionCard {`	**Execute: .noSelectionCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
316	`  border: 1px dashed var(--border, #cbd5e1);`	**CSS Property: border = 1px dashed var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
317	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
318	`  border-radius: var(--radius-xl, 1rem);`	**CSS Property: border-radius = var(--radius-xl, 1rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
319	`  padding: 4rem 2.5rem;`	**CSS Property: padding = 4rem 2.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
320	`  text-align: center;`	**CSS Property: text-align = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
321	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
322	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
323	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
324	`  justify-content: center;`	**CSS Property: justify-content = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
325	`  gap: 1rem;`	**CSS Property: gap = 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
326	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
327		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
328	`.noSelectionIcon {`	**Execute: .noSelectionIcon {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
329	`  color: var(--text-tertiary, #94a3b8);`	**CSS Property: color = var(--text-tertiary, #94a3b8)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
330	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
331		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
332	`.noSelectionText {`	**Execute: .noSelectionText {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
333	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
334	`  color: var(--text-secondary, #475569);`	**CSS Property: color = var(--text-secondary, #475569)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
335	`  max-width: 28rem;`	**CSS Property: max-width = 28rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
336	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
337	`  line-height: 1.6;`	**CSS Property: line-height = 1.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
338	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
339		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
340	`.activeContentWrap {`	**Execute: .activeContentWrap {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
341	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
342	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
343	`  gap: 1.75rem;`	**CSS Property: gap = 1.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
344	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
345		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
346	`/* Section Card */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
347	`.sectionCard {`	**Execute: .sectionCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

388		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
389	`.pdfIframe {`	**Execute: .pdfIframe {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
390	`  width: 100%;`	**CSS Property: width = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
391	`  height: 100%;`	**CSS Property: height = 100%** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
392	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
393	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
394		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
395	`.previewLoading {`	**Execute: .previewLoading {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
396	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
397	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
398	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
399	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
400	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
401	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
402	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
403		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
404	`.previewPlaceholder {`	**Execute: .previewPlaceholder {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
405	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
406	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
407	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
408	`  text-align: center;`	**CSS Property: text-align = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
409	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
410	`  padding: 2rem;`	**CSS Property: padding = 2rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
411	`  max-width: 24rem;`	**CSS Property: max-width = 24rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
412	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
413		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
414	`.placeholderIcon {`	**Execute: .placeholderIcon {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
415	`  color: var(--primary, #f97316);`	**CSS Property: color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
416	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
417		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
418	`.placeholderTitle {`	**Execute: .placeholderTitle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
419	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
420	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
421	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
422		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
423	`.placeholderSub {`	**Execute: .placeholderSub {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
424	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
425	`  color: var(--text-tertiary, #64748b);`	**CSS Property: color = var(--text-tertiary, #64748b)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
426	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
427	`  line-height: 1.4;`	**CSS Property: line-height = 1.4** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
428	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
429		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
430	`/* Search Form */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
431	`.searchForm,`	**Execute: .searchForm,** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
432	`.askForm {`	**Execute: .askForm {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
433	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
434	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
435	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
436	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
437		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
438	`.inputLabel {`	**Execute: .inputLabel {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
439	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
440	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
441	`  color: var(--text-secondary, #334155);`	**CSS Property: color = var(--text-secondary, #334155)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
442	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
443		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
444	`.searchInputRow {`	**Execute: .searchInputRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
445	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
446	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
447	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
448		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
449	`.textInput {`	**Execute: .textInput {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
450	`  flex: 1;`	**CSS Property: flex = 1** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
451	`  padding: 0.625rem 1rem;`	**CSS Property: padding = 0.625rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
452	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
453	`  border: 1px solid var(--border, #cbd5e1);`	**CSS Property: border = 1px solid var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
454	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
455	`  background-color: #ffffff;`	**CSS Property: background-color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
456	`  outline: none;`	**CSS Property: outline = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
457	`  transition: border-color 0.15s ease;`	**CSS Property: transition = border-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
458	`  font-family: inherit;`	**CSS Property: font-family = inherit** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
459	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 478	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
479		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
480	`.primaryActionBtn {`	**Execute: .primaryActionBtn {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
481	`  display: inline-flex;`	**CSS Property: display = inline-flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
482	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
483	`  gap: 0.4rem;`	**CSS Property: gap = 0.4rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
484	`  padding: 0.625rem 1.25rem;`	**CSS Property: padding = 0.625rem 1.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
485	`  background-color: var(--primary, #f97316);`	**CSS Property: background-color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
486	`  color: #ffffff;`	**CSS Property: color = #ffffff** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
487	`  border: none;`	**CSS Property: border = none** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
488	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
489	`  font-size: 0.875rem;`	**CSS Property: font-size = 0.875rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
490	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
491	`  cursor: pointer;`	**CSS Property: cursor = pointer** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
492	`  transition: background-color 0.15s ease;`	**CSS Property: transition = background-color 0.15s ease** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
493	`  white-space: nowrap;`	**CSS Property: white-space = nowrap** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
494	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
495		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
496	`.primaryActionBtn:hover:not(:disabled) {`	**CSS Property: .primaryActionBtn = hover:not(:disabled) {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
497	`  background-color: var(--primary-hover, #ea580c);`	**CSS Property: background-color = var(--primary-hover, #ea580c)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
498	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
499		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
500	`.primaryActionBtn:disabled {`	**CSS Property: .primaryActionBtn = disabled {** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
501	`  opacity: 0.6;`	**CSS Property: opacity = 0.6** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
502	`  cursor: not-allowed;`	**CSS Property: cursor = not-allowed** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
503	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
504		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
505	`.askActionRow {`	**Execute: .askActionRow {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
506	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
507	`  justify-content: flex-start;`	**CSS Property: justify-content = flex-start** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
508	`  margin-top: 0.25rem;`	**CSS Property: margin-top = 0.25rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
509	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
510		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
511	`.errorAlert {`	**Execute: .errorAlert {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
512	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
513	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
514	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
515	`  padding: 0.75rem 1rem;`	**CSS Property: padding = 0.75rem 1rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
516	`  background-color: var(--error-light, #fee2e2);`	**CSS Property: background-color = var(--error-light, #fee2e2)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
517	`  border: 1px solid rgba(239, 68, 68, 0.3);`	**CSS Property: border = 1px solid rgba(239, 68, 68, 0.3)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
518	`  border-radius: var(--radius-md, 0.5rem);`	**CSS Property: border-radius = var(--radius-md, 0.5rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
519	`  color: var(--error, #ef4444);`	**CSS Property: color = var(--error, #ef4444)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
520	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
521	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
522		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
523	`/* Results */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
524	`.searchResultsList {`	**Execute: .searchResultsList {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
525	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
526	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
527	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
528	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
529	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
530		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
531	`.resultsHeading {`	**Execute: .resultsHeading {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
532	`  font-size: 0.9375rem;`	**CSS Property: font-size = 0.9375rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
533	`  font-weight: 600;`	**CSS Property: font-weight = 600** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
534	`  color: var(--text-primary, #0f172a);`	**CSS Property: color = var(--text-primary, #0f172a)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
535	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
536	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. 574	`  background-color: #dbeafe;`	**CSS Property: background-color = #dbeafe** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
575	`  color: #1e40af;`	**CSS Property: color = #1e40af** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
576	`  border-radius: var(--radius-sm, 0.25 rem);`	**CSS Property: border-radius = var(--radius-sm, 0.25rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
577	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
578		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
579	`.excerptContent {`	**Execute: .excerptContent {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
580	`  font-size: 0.8125rem;`	**CSS Property: font-size = 0.8125rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
581	`  color: var(--text-secondary, #334155);`	**CSS Property: color = var(--text-secondary, #334155)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
582	`  line-height: 1.5;`	**CSS Property: line-height = 1.5** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
583	`  margin: 0;`	**CSS Property: margin = 0** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
584	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
585		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
586	`/* AI Answer Card */`	**Developer Documentation / Code Annotation** **WHY:** Documents the developer's intent, edge cases, requirements, or architecture decisions for future maintainers and learners. **WHEN:** Read by developers during code review; ignored by the JavaScript engine / MySQL interpreter during execution. **HOW:** The tokenizer discards comment tokens during the lexical analysis phase.
587	`.aiAnswerCard {`	**Execute: .aiAnswerCard {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
588	`  background-color: var(--surface-container-low, #f8fafc);`	**CSS Property: background-color = var(--surface-container-low, #f8fafc)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
589	`  border: 1px solid var(--border, #cbd5e1);`	**CSS Property: border = 1px solid var(--border, #cbd5e1)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
590	`  border-radius: var(--radius-lg, 0.75 rem);`	**CSS Property: border-radius = var(--radius-lg, 0.75rem)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
591	`  padding: 1.25rem 1.5rem;`	**CSS Property: padding = 1.25rem 1.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
592	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
593	`  flex-direction: column;`	**CSS Property: flex-direction = column** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
594	`  gap: 0.75rem;`	**CSS Property: gap = 0.75rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
595	`  margin-top: 0.5rem;`	**CSS Property: margin-top = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
596	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
597		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
598	`.aiAnswerHeader {`	**Execute: .aiAnswerHeader {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
599	`  display: flex;`	**CSS Property: display = flex** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
600	`  align-items: center;`	**CSS Property: align-items = center** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
601	`  gap: 0.5rem;`	**CSS Property: gap = 0.5rem** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.

LINE	SOURCE CODE	DETAILED LINE-BY-LINE EXPLANATION (WHY, WHEN, HOW)
602	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
603		**Whitespace / Visual Separation** **WHY:** Separates logical code blocks to improve human readability and reduce cognitive load according to clean code standards. **WHEN:** Ignored at runtime by JavaScript / SQL compilers; whitespace is stripped during AST parsing. **HOW:** The lexer tokenizes consecutive whitespace characters and skips them.
604	`.aiAnswerSparkle {`	**Execute: .aiAnswerSparkle {** **WHY:** Performs intermediate computation, syntax binding, or statement execution essential for module logic. **WHEN:** Executes sequentially when the JavaScript / SQL engine reaches this statement. **HOW:** The runtime evaluates expressions, handles function calls, and updates the local scope.
605	`  color: var(--primary, #f97316);`	**CSS Property: color = var(--primary, #f97316)** **WHY:** Applies visual styling, sizing, alignment, or color to matched DOM elements. **WHEN:** Calculated by browser rendering engine during layout and paint phases. **HOW:** Browser computes final CSSOM value and applies it to the render tree.
606	`}`	**Scope & Block Closure** **WHY:** Marks the formal boundary of an execution block, function body, object literal, or conditional scope. **WHEN:** Executes when the program leaves the current lexical scope. **HOW:** Unwinds the stack frame or closes the object definition. Any local variables declared in this block that have no remaining references become eligible for garbage collection.
